CONTENTS.

DIRECTIONS AND INFORMATION FOR THE TOURIST.

Windermere.—Ambleside.—Coniston.—Ulpha Kirk.—
Road from Ambleside to Keswick.—Grasmere.—The
Vale of Keswick.—Buttermere and Crummock.—
Lowswater.—Wastdale.—Ullswater, with its tribu-
tary Streams.—Haweswater, &c. - Page i.

DESCRIPTION OF THE SCENERY OF THE LAKES.

SECTION FIRST.

VIEW OF THE COUNTRY AS FORMED BY NATURE.

Vales diverging from a common Centre.—Effect of Light
and Shadow as dependant upon the Position of the
Vales.—Mountains,—their Substance,—Surfaces,—
and Colours.—Winter Colouring.—The Vales,—
Lakes,—Islands,—Tarns,—Woods,—Rivers,—Cli-
mate,—Night. - - - p. 1

SECTION SECOND.

ASPECT OF THE COUNTRY AS AFFECTED BY ITS INHABITANTS.

Retrospect.—Primitive Aspect.—Roman and British
Antiquities.—Feudal Tenantry,—their Habitations
and Enclosures.—Tenantry reduced in Number by the
Union of the Two Crowns.—State of Society after
that Event.—Cottages,—Bridges,—Places of Wor-
ship,—Parks and Mansions.—General Picture of So-
ciety. - - - - - 37

CONTENTS.

SECTION THIRD.

CHANGES, AND RULES OF TASTE FOR PREVENTING
THEIR BAD EFFECTS.

Tourists.—New Settlers.—The Country disfigured.—
Causes of false Taste in Grounds and Buildings.—
Ancient Models recommended.—Houses.—Colouring
of Buildings.—Grounds and Plantations.—The Larch.
—Planting—Further Changes Probable.—Conclu-
sion. - - - - Page 60

MISCELLANEOUS OBSERVATIONS.

Time for visiting the Country.—Order in which Objects
should be approached.—Views from the Heights.—
Comparisons, how injurious.—Alpine Scenes com-
pared with Cumbrian, &c.—Phenomena.—Compara-
tive Estimate. - - - - 89

EXCURSIONS

TO THE TOP OF SCAWFELL AND ON THE BANKS OF
ULLSWATER, p. 112.

ODE.

. THE PASS OF KIRKSTONE. p. 132.

ITINERARY. p. 135.

DIRECTIONS AND INFORMATION

FOR

THE TOURIST.

In preparing this Manual, it was the Author's principal wish to furnish a Guide or Companion for the *Minds* of Persons of taste, and feeling for Landscape, who might be inclined to explore the District of the Lakes with that degree of attention to which its beauty may fairly lay claim. For the more sure attainment, however, of this primary object, he will begin by undertaking the humble and tedious task of supplying the Tourist with directions how to approach the several scenes in their best, or most convenient, order. / But first, supposing the approach to be made from the south, and through Yorkshire, there are certain interesting spots which may be confidently recommended to his notice, if time can be spared before entering upon the Lake District; and the route may be changed in returning.

There are three approaches to the Lakes through Yorkshire; the least adviseable is the

great north road by Catterick and Greta Bridge, and onwards to Penrith. The Traveller, however, taking this route, might halt at Greta Bridge, and be well recompensed if he can afford to give an hour or two to the banks of the Greta, and of the Tees, at Rokeby. Barnard Castle also, about two miles up the Tees, is a striking object, and the main North Road might be rejoined at Bowes. Every one has heard of the great fall of the Tees above Middleham, interesting for its grandeur, as the avenue of rocks that leads to it, is to the geologist. But this place lies so far out of the way as scarcely to be within the compass of our notice. It might, however, be visited by a Traveller on foot, or on horseback, who could rejoin the main road upon Stanemoor.

The second road leads through a more interesting tract of country, beginning at Ripon, from which place see Fountain's Abbey, and thence by Hackfall, and Masham, to Jervaux Abbey, and up the vale of Wensley; turning aside before Askrigg is reached, to see Aysgarth-force, upon the Ure; and again, near Hawes, to Hardraw Scar, of which, with its waterfall, Turner has a fine drawing. Thence over the fells to Sedbergh, and Kendal.

The third approach from Yorkshire is through Leeds. Four miles beyond that town are the ruins of Kirkstall Abbey, should that road to Skipton be chosen; but the other by Otley may be made much more interesting by turning off at Addington to Bolton Bridge, for the

sake of visiting the Abbey and grounds. It would be well, however, for a party previously to secure beds, if wanted, at the inn, as there is but one, and it is much resorted to in summer.

The Traveller on foot, or horseback, would do well to follow the banks of the Wharf upwards, to Burnsall, and thence cross over the hills to Gordale—a noble scene, beautifully described in Gray's Tour, and with which no one can be disappointed. Thence to Malham, where there is a respectable village inn, and so on, by Malham Cove, to Settle.

Travellers in carriages must go from Bolton Bridge to Skipton, where they rejoin the main road; and should they be inclined to visit Gordale, a tolerable road turns off beyond Skipton. Beyond Settle, under Giggleswick Scar, the road passes an ebbing and flowing well, worthy the notice of the Naturalist. Four miles to the right of Ingleton, is Weathercote Cave, a fine object, but whoever diverges for this, must return to Ingleton. Near Kirkby Lonsdale observe the view from the bridge over the Lune, and descend to the channel of the river, and by no means omit looking at the Vale of Lune from the Church-yard.

The journey towards the lake country through Lancashire, is, with the exception of the Vale of the Ribble, at Preston, uninteresting; till you come near Lancaster, and obtain a view of the fells and mountains of Lancashire and Westmorland; with Lancaster Castle, and the

Tower of the Church seeming to make part of the Castle, in the foreground.

They who wish to see the celebrated ruins of Furness Abbey, and are not afraid of crossing the Sands, may go from Lancaster to Ulverston ; from which place take the direct road to Dalton ; but by all means return through Urswick, for the sake of the view from the top of the hill, before descending into the grounds of Conishead Priory. From this quarter the Lakes would be advantageously approached by Coniston ; thence to Hawkshead, and by the Ferry over Windermere, to Bowness : a much better introduction than by going direct from Coniston to Ambleside, which ought not to be done, as that would greatly take off from the effect of Windermere.

Let us now go back to Lancaster. The direct road thence to Kendal is 22 miles, but by making a circuit of eight miles, the Vale of the Lune to Kirkby Lonsdale will be included. The whole tract is pleasing ; there is one view mentioned by Gray and Mason especially so. In West's Guide it is thus pointed out :—
“About a quarter of a mile beyond the third mile-stone, where the road makes a turn to the right, there is a gate on the left which leads into a field where the station meant, will be found.” Thus far for those who approach the Lakes from the South.

Travellers from the North would do well to go from Carlisle by Wigton, and proceed along the Lake of Bassenthwaite to Keswick ; or, if

convenience should take them first to Penrith, it would still be better to cross the country to Keswick, and begin with that vale, rather than with Ulswater. It is worth while to mention, in this place, that the banks of the river Eden, about Corby, are well worthy of notice, both on account of their natural beauty, and the viaducts which have recently been carried over the bed of the river, and over a neighbouring ravine. In the Church of Wetherby, close by, is a fine piece of monumental sculpture by Nollekins. The scenes of Nunnery, upon the Eden, or rather that part of them which is upon Croglin, a mountain stream there falling into the Eden, are, in their way, unrivalled. But the nearest road thither, from Corby, is so bad, that no one can be advised to take it in a carriage. Nunnery may be reached from Corby by making a circuit and crossing the Eden at Armathwaite bridge. A portion of this road, however, is bad enough.

As much the greatest number of Lake Tourists begin by passing from Kendal to Bowness, upon Windermere, our notices shall commence with that Lake. Bowness is situated upon its eastern side, and at equal distance from each extremity of the Lake of

WINDERMERE.

The lower part of this Lake is rarely visited, but has many interesting points of view, especially at Storr's Hall and at Fell-foot, where

the Coniston Mountains peer nobly over the western barrier, which elsewhere, along the whole Lake, is comparatively tame. To one also who has ascended the hill from Grathwaite on the western side, the Promontory called Rawlinson's Nab, Storr's Hall, and the Troutbeck Mountains, about sun-set, make a splendid landscape. The view from the Pleasure-house of the Station near the Ferry has suffered much from Larch plantations; this mischief, however, is gradually disappearing, and the Larches, under the management of the proprietor, Mr. Curwen, are giving way to the native wood. Windermere ought to be seen both from its shores and from its surface. None of the other Lakes unfold so many fresh beauties to him who sails upon them. This is owing to its greater size, to the islands, and to its having *two* vales at the head, with their accompanying mountains of nearly equal dignity. Nor can the grandeur of these two terminations be seen at once from any point, except from the bosom of the Lake. The Islands may be explored at any time of the day; but one bright unruffled evening, must, if possible, be set apart for the splendour, the stillness, and solemnity of a three hour's voyage upon the higher division of the Lake, not omitting, towards the end of the excursion, to quit the expanse of water, and peep into the close and calm River at the head; which, in its quiet character, at such a time, appears rather like an overflow of the peaceful Lake

itself, than to have any more immediate connection with the rough mountains whence it has descended, or the turbulent torrents by which it is supplied. Many persons content themselves with what they see of Windermere during their progress in a boat from Bowness to the head of the Lake, walking thence to Ambleside. But the whole road from Bowness is rich in diversity of pleasing or grand scenery; there is scarcely a field on the road side, which, if entered, would not give to the landscape some additional charm. Low-wood Inn, a mile from the head of Windermere, is a most pleasant halting-place; no inn in the whole district is so agreeably situated for water views and excursions; and the fields above it, and the lane that leads to Troutbeck, present beautiful views towards each extremity of the Lake. From this place, and from

AMBLESIDE,

Rides may be taken in numerous directions, and the interesting walks are inexhaustible;* a few out of the main road may be particularized;—the lane that leads from Ambleside to Skelgill; the ride, or walk by Rothay Bridge, and up the stream under Loughrigg Fell, continued on the western side of Rydal Lake, and

* Mr. Green's Guide to the Lakes, in two vols., contains a complete Magazine of minute and accurate information of this kind, with the names of mountains, streams, &c.

along the fell to the foot of Grasmere Lake, and thence round by the church of Grasmere; or, turning round Loughrigg Fell by Loughrigg Tarn and the River Brathay, back to Ambleside. From Ambleside is another charming excursion by Clappersgate, where cross the Brathay, and proceed with the river on the right to the hamlet of Skelwith-fold; when the houses are passed, turn, before you descend the hill, through a gate on the right, and from a rocky point is a fine view of the Brathay River, Langdale Pikes, &c.; then proceed to Colwith-force, and up Little Langdale to Blea Tarn. The scene in which this small piece of water lies, suggested to the Author the following description, (given in his Poem of the Excursion) supposing the spectator to look down upon it, not from the road, but from one of its elevated sides.

“ Behold !

Beneath our feet, a little lowly Vale,
 A lowly Vale, and yet uplifted high
 Among the mountains; even as if the spot
 Had been, from eldest time by wish of theirs,
 So placed, to be shut out from all the world !
 Urn-like it was in shape; deep as an Urn;
 With rocks encompassed, save that to the South
 Was one small opening, where a heath-clad ridge
 Supplied a boundary less abrupt and close;
 A quiet treeless nook,* with two green fields,
 A liquid pool that glittered in the sun,
 And one bare Dwelling; one Abode, no more !

* No longer strictly applicable, on account of recent plantations.

It seemed the home of poverty and toil,
 Though not of want : the little fields, made green
 By husbandry of many thrifty years,
 Paid cheerful tribute to the moorland House.
 — There crows the Cock, single in his domain :
 The small birds find in spring no thicket there
 To shroud them ; only from the neighbouring Vales
 The Cuckoo, straggling up to the hill tops,
 Shouteth faint tidings of some gladder place.”

From this little Vale return towards Ambleside by Great Langdale, stopping, if there be time, to see Dungeon-ghyll waterfall.

The Lake of

CONISTON

May be conveniently visited from Ambleside, but is seen to most advantage by entering the country over the Sands from Lancaster. The Stranger, from the moment he sets his foot on those Sands, seems to leave the turmoil and traffic of the world behind him ; and, crossing the majestic plain whence the sea has retired, he beholds, rising apparently from its base, the cluster of mountains among which he is going to wander, and towards whose recesses, by the Vale of Coniston, he is gradually and peacefully led. From the Inn at the head of Coniston Lake, a leisurely Traveller might have much pleasure in looking into Yewdale and Tilberthwaite, returning to his Inn from the head of Yewdale by a mountain track which has the farm of Tarn Hows, a little on the right : by this road is seen much

the best view of Coniston Lake from the south. At the head of Coniston Water there is an agreeable Inn, from which an enterprising Tourist might go to the Vale of the Duddon, over Walna Scar, down to Seathwaite, Newfield, and to the rocks where the river issues from a narrow pass into the broad Vale. The stream is very interesting for the space of a mile above this point, and below, by Ulpha Kirk, till it enters the Sands, where it is overlooked by the solitary Mountain Black Comb, the summit of which, as that experienced surveyor, Colonel Mudge, declared, commands a more extensive view than any point in Britain. Ireland he saw more than once, but not when the sun was above the horizon.

“ Close by the Sea, lone sentinel,
 Black-Comb his forward station keeps ;
 He breaks the sea's tumultuous swell, —
 And ponders o'er the level deeps.

He listens to the bugle horn,
 Where Eskdale's lovely valley bends ;
 Eyes Walney's early fields of corn ;
 Sea-birds to Holker's woods he sends.

Beneath his feet the sunk ship rests,
 In Duddon Sands, its masts all bare :

* * * * *

The Minstrels of Windermere, by Chas. Farish, B.D.

The Tourist may either return to the Inn at Coniston by Broughton, or, by turning to the left before he comes to that town, or, which would be much better, he may cross from

ULPHA KIRK

Over Birker moor, to Birker-force, at the head of the finest ravine in the country ; and thence up the Vale of the Esk, by Hardknot and Wrynose, back to Ambleside. Near the road, in ascending from Eskdale, are conspicuous remains of a Roman fortress. Details of the Duddon and Donnerdale are given in the Author's series of Sonnets upon the Duddon and in the accompanying Notes. In addition to its two Vales at its head, Windermere communicates with two lateral Vallies ; that of Troutbeck, distinguished by the mountains at its head — by picturesque remains of cottage architecture ; and, towards the lower part, by bold foregrounds formed by the steep and winding banks of the river. This Vale, as before mentioned, may be most conveniently seen from Low Wood. The other lateral Valley, that of Hawkshead, is visited to most advantage, and most conveniently, from Bowness ; crossing the Lake by the Ferry — then pass the two villages of Sawrey, and on quitting the latter, you have a fine view of the Lake of Esthwaite, and the cone of one of the Langdale Pikes in the distance.

Before you leave Ambleside give three minutes to looking at a passage of the brook which runs through the town ; it is to be seen from a garden on the right bank of the stream, a few steps above the bridge — the garden at

present is rented by Mrs. Airey. — Stockgill-force, upon the same stream, will have been mentioned to you as one of the sights of the neighbourhood. And by a Tourist halting a few days in Ambleside, the *Nook* also might be visited ; a spot where there is a bridge over Scandale-beck, which makes a pretty subject for the pencil. Lastly, for residents of a week or so at Ambleside, there are delightful rambles over every part of Loughrigg Fell and among the enclosures on its sides ; particularly about Loughrigg Tarn, and on its eastern side about Fox How and the properties adjoining to the northwards.

ROAD FROM AMBLESIDE TO KESWICK.

The Waterfalls of Rydal are pointed out to every one. But it ought to be observed here, that Rydal-mere is no where seen to advantage from the *main road*. Fine views of it may be had from Rydal Park ; but these grounds, as well as those of Rydal Mount and Ivy Cottage, from which also it is viewed to advantage, are private. A foot road passing behind Rydal Mount and under Nab Scar to Grasmere, is very favourable to views of the Lake and the Vale, looking back towards Ambleside. The horse road also, along the western side of the Lake, under Loughrigg fell, as before mentioned, does justice to the beauties of this small mere, of which the Traveller who keeps the high road is not at all aware.

GRASMERE.

There are two small Inns in the Vale of Grasmere, one near the Church, from which it may be conveniently explored in every direction, and a mountain walk taken up Easedale to Easedale Tarn, one of the finest tarns in the country, thence to Stickle Tarn, and to the top of Langdale Pikes. See also the Vale of Grasmere from Butterlip How. A boat is kept by the innkeeper, and this circular Vale, in the solemnity of a fine evening, will make, from the bosom of the Lake, an impression that will be scarcely ever effaced.

The direct road from Grasmere to Keswick does not (as has been observed of Rydal Mere) shew to advantage Thirlmere, or Wythburn Lake, with its surrounding mountains. By a Traveller proceeding at leisure, a deviation ought to be made from the main road, when he has advanced a little beyond the sixth mile-stone short of Keswick, from which point there is a noble view of the Vale of Legberthwaite, with Blencathra (commonly called Saddle-back) in front. Having previously enquired, at the Inn near Wythburn Chapel, the best way from this mile-stone to the bridge that divides the Lake, he must cross it, and proceed with the Lake on the right, to the hamlet a little beyond its termination, and rejoin the main road upon Shoulthwaite Moss, about four miles from Keswick ; or, if on foot, the Tourist may

follow the stream that issues from Thirlmere down the romantic Vale of St. John's, and so (enquiring the way at some cottage) to Keswick, by a circuit of little more than a mile. A more interesting tract of country is scarcely any where to be seen, than the road between Ambleside and Keswick, with the deviations that have been pointed out. Helvellyn may be conveniently ascended from the Inn at Wythburn.

THE VALE OF KESWICK.

This Vale stretches, without winding, nearly North and South, from the head of Derwent Water to the foot of Bassenthwaite Lake. It communicates with Borrowdale on the South; with the river Greta, and Thirlmere, on the East, with which the Traveller has become acquainted on his way from Ambleside; and with the Vale of Newlands on the West — which last Vale he may pass through, in going to, or returning from, Buttermere. The best views of Keswick Lake are from Crow Park; Frier's Crag; the Stable-field, close by; the Vicarage, and from various points in taking the circuit of the Lake. More distant views, and perhaps full as interesting, are from the side of Latrigg, from Ormathwaite, and Applethwaite; and thence along the road at the foot of Skiddaw towards Bassenthwaite, for about a quarter of a mile. There are fine bird's eye views from the Castle-hill; from

Ashness, on the road to Watenlath, and by following the Watenlath stream downwards to the Cataract of Lodore. This Lake also, if the weather be fine, ought to be circumnavigated. There are good views along the western side of Bassenthwaite Lake, and from Armathwaite at its foot; but the eastern side from the high road has little to recommend it. The Traveller from Carlisle, approaching by way of Ireby, has, from the old road on the top of Bassenthwaite-hawse, much the most striking view of the Plain and Lake of Bassenthwaite, flanked by Skiddaw, and terminated by Wallowcrag on the south-east of Derwent Lake; the same point commands an extensive view of Solway Frith and the Scotch Mountains. They who take the circuit of Derwent Lake, may at the same time include BORROWDALE, going as far as Bowder-stone, or Rosthwaite. Borrowdale is also conveniently seen on the way to Wastdale over Styhead; or, to Buttermere, by Seatoller and Honister Crag; or, going over the Stake, through Langdale, to Ambleside. Buttermere may be visited by a shorter way through Newlands, but though the descent upon the Vale of Buttermere, by this approach, is very striking, as it also is to one entering by the head of the Vale, under Honister Crag, yet, after all, the best entrance from Keswick is from the lower part of the Vale, having gone over Whinlatter to Scale Hill, where there is a roomy Inn, with very good accommodation. The Mountains of the Vale of

BUTTERMERE AND CRUMMOCK

Are no where so impressive as from the bosom of Crummock Water. Scale-force, near it, is a fine chasm, with a lofty, though but slender, fall of water.

From Scale Hill a pleasant walk may be taken to an eminence in Mr. Marshall's woods, and another by crossing the bridge at the foot of the hill, upon which the Inn stands, and turning to the right, after the opposite hill has been ascended a little way, then follow the road for half a mile or so that leads towards Lorton, looking back upon Crummock Water, &c., between the openings of the fences. Turn back and make your way to

LOWESWATER.

But this small Lake is only approached to advantage from the other end; therefore any Traveller going by this road to Wasdale, must look back upon it. This road to Wastdale, after passing the village of Lamplugh Cross, presents suddenly a fine view of the Lake of Ennerdale, with its Mountains; and, six or seven miles beyond, leads down upon Calder Abbey. Little of this ruin is left, but that little is well worthy of notice. At Calder Bridge are two comfortable Inns, and, a few miles beyond, accommodations may be had at the Strands, at the foot of Wastdale. Into

WASTDALE

Are three horse-roads, viz. over the Styne from Borrowdale; a short cut from Eskdale by Burnmoor Tarn, which road descends upon the head of the Lake; and the principal entrance from the open country by the Strands at its foot. This last is much the best approach. Wastdale is well worth the notice of the Traveller who is not afraid of fatigue; no part of the country is more distinguished by sublimity. Wastwater may also be visited from Ambleside; by going up Langdale, over Hardknot and Wrynose—down Eskdale and by Irton Hall to the Strands; but this road can only be taken on foot, or on horseback, or in a cart.

We will conclude with

ULLSWATER,

As being, perhaps, upon the whole, the happiest combination of beauty and grandeur, which any of the Lakes affords. It lies not more than ten miles from Ambleside, and the Pass of Kirkstone and the descent from it are very impressive; but, notwithstanding, this Vale, like the others, loses much of its effect by being entered from the head: so that it is better to go from Keswick through Matterdale, and descend upon Gowbarrow Park; you are thus brought at once upon a magnifi-

cent view of the two higher reaches of the Lake. Ara-force thunders down the Ghyll on the left, at a small distance from the road. If Ullswater be approached from Penrith, a mile and a half brings you to the winding vale of Eamont, and the prospects increase in interest till you reach Patterdale; but the first four miles along Ullswater by this road are comparatively tame; and in order to see the lower part of the Lake to advantage, it is necessary to go round by Pooley Bridge, and to ride at least three miles along the Westmorland side of the water, towards Martindale. The views, especially if you ascend from the road into the fields, are magnificent; yet this is only mentioned that the transient Visitant may know what exists; for it would be inconvenient to go in search of them. They who take this course of three or four miles *on foot*, should have a boat in readiness at the end of the walk, to carry them across to the Cumberland side of the Lake, near Old Church, thence to pursue the road upwards to Patterdale. The Church-yard Yew-tree still survives at Old Church, but there are no remains of a Place of Worship, a New Chapel having been erected in a more central situation, which Chapel was consecrated by the then Bishop of Carlisle, when on his way to crown Queen Elizabeth, he being the only Prelate who would undertake the office. It may be here mentioned that Bassenthwaite Chapel yet stands in a bay as sequestered as the Site of Old Church;

such situations having been chosen in disturbed times to elude marauders.

The Trunk, or Body of the Vale of Ullswater need not be further noticed, as its beauties show themselves: but the curious Traveller may wish to know something of its tributary Streams.

At Dalemain, about three miles from Penrith, a Stream is crossed called the Dacre, or Dacor, which name it bore as early as the time of the Venerable Bede. This stream does not enter the Lake, but joins the Eamont a mile below. It rises in the moorish Country about Penruddock, flows down a soft sequestered Valley, passing by the ancient mansions of Hutton John and Dacre Castle. The former is pleasantly situated, though of a character somewhat gloomy and monastic, and from some of the fields near Dalemain, Dacre Castle, backed by the jagged summit of Saddleback, with the Valley and Stream in front, forms a grand picture. There is no other stream that conducts to any glen or valley worthy of being mentioned, till we reach that which leads up to Ara-force, and thence into Matteredale, before spoken of. Matteredale, though a wild and interesting spot, has no peculiar features that would make it worth the Stranger's while to go in search of them; but, in Gowbarrow Park, the lover of Nature might linger for hours. Here is a powerful Brook, which dashes among rocks through a deep glen, hung on every side with a rich and happy

intermixture of native wood ; here are beds of luxuriant fern, aged hawthorns, and hollies decked with honeysuckles ; and fallow-deer glancing and bounding over the lawns and through the thickets. These are the attractions of the retired views, or constitute a foreground for ever-varying pictures of the majestic Lake, forced to take a winding course by bold promontories, and environed by mountains of sublime form, towering above each other. At the outlet of Gowbarrow Park, we reach a third stream, which flows through a little recess called Glencoin, where lurks a single house, yet visible from the road. Let the Artist or leisurely Traveller turn aside to it, for the buildings and objects around them are romantic and picturesque. Having passed under the steeps of Styebarrow Crag, and the remains of its native woods, at Glenridding Bridge, a fourth Stream is crossed.

The opening on the side of Ullswater Vale, down which this Stream flows, is adorned with fertile fields, cottages, and natural groves, that agreeably unite with the transverse views of the Lake ; and the Stream, if followed up after the enclosures are left behind, will lead along bold water-breaks and waterfalls to a silent Tarn in the recesses of Helvellyn. This desolate spot was formerly haunted by eagles, that built in the precipice which forms its western barrier. These birds used to wheel and hover round the head of the solitary angler. It also derives a melancholy interest

from the fate of a young man, a stranger, who perished some years ago, by falling down the rocks in his attempt to cross over to Grasmere. His remains were discovered by means of a faithful dog that had lingered here for the space of three months, self-supported, and probably retaining to the last an attachment to the skeleton of its master. But to return to the road in the main Vale of Ullswater. — At the head of the Lake (being now in Patterdale) we cross a fifth Stream, Grisdale Beck: this would conduct through a woody steep, where may be seen some unusually large ancient hollies, up to the level area of the Valley of Grisdale; hence there is a path for foot-travellers, and along which a horse may be led, to Grasmere. A sublime combination of mountain forms appears in front while ascending the bed of this valley, and the impression increases till the path leads almost immediately under the projecting masses of Helvellyn. Having retraced the banks of the Stream to Patterdale, and pursued the road up the main Dale, the next considerable stream would, if ascended in the same manner, conduct to Deepdale, the character of which Valley may be conjectured from its name. It is terminated by a cove, a craggy and gloomy abyss, with precipitous sides; a faithful receptacle of the snows that are driven into it, by the west wind, from the summit of Fairfield. Lastly, having gone along the western side of Brotherswater and passed Hartsop Hall, a Stream soon after is-

sues from a cove richly decorated with native wood. This spot is, I believe, never explored by Travellers; but, from these sylvan and rocky recesses, whoever looks back on the gleaming surface of Brotherswater, or forward to the precipitous sides and lofty ridges of Dove Crag, &c., will be equally pleased with the beauty, the grandeur, and the wildness of the scenery.

Seven Glens or Vallies have been noticed, which branch off from the Cumberland side of the Vale. The opposite side has only two Streams of any importance, one of which would lead up from the point where it crosses the Kirkstone-road, near the foot of Brotherswater, to the decaying hamlet of Hartsop, remarkable for its cottage architecture, and thence to Hayswater, much frequented by anglers. The other, coming down Martindale, enters Ullswater at Sandwyke, opposite to Gowbarrow Park. No persons but such as come to Patterdale, merely to pass through it, should fail to walk as far as Blowick, the only enclosed land which on this side borders the higher part of the Lake. The axe has here indiscriminately levelled a rich wood of birches and oaks, that divided this favoured spot into a hundred pictures. It has yet its land-locked bays, and rocky promontories; but those beautiful woods are gone, which *perfected* its seclusion; and scenes, that might formerly have been compared to an inexhaustible volume, are now spread before the eye in a sin-

gle sheet,—magnificent indeed, but seemingly perused in a moment! From Blowick a narrow track conducts along the craggy side of Place-fell, richly adorned with juniper, and sprinkled over with birches, to the village of Sandwyke, a few straggling houses, that with the small estates attached to them, occupy an opening opposite to Lyulph's Tower and Gowbarrow Park. In Martindale,* the road loses sight of the Lake, and leads over a steep hill, bringing you again into view of Ullswater. Its lowest reach, four miles in length, is before you; and the view terminated by the long ridge of Cross Fell in the distance. Immediately under the eye is a deep-indented bay, with a plot of fertile land, traversed by a small brook, and rendered cheerful by two or three substantial houses of a more ornamented and showy appearance than is usual in those wild spots.

From Pooley Bridge, at the foot of the Lake, Haweswater may be conveniently visited. Haweswater is a lesser Ullswater, with this advantage, that it remains undefiled by the intrusion of bad taste.

Lowther Castle is about four miles from Pooley Bridge, and, if during this Tour the Stranger has complained, as he will have had reason to do, of a want of majestic trees, he may be abundantly recompensed for his loss in the far-spreading woods which surround

* See Page 125.

that mansion. Visitants, for the most part, see little of the beauty of these magnificent grounds, being content with the view from the Terrace; but the whole course of the Lowther, from Askham to the bridge under Brougham Hall, presents almost at every step some new feature of river, woodland, and rocky landscape. A portion of this tract has, from its beauty, acquired the name of the Elysian Fields;—but the course of the stream can only be followed by the pedestrian.

NOTE.—*Vide* p. xii.—About 200 yards beyond the last house on the Keswick side of Rydal village the road is cut through a low wooded rock, called Thrang Crag. The top of it, which is only a few steps on the south side, affords the best view of the Vale which is to be had by a Traveller who confines himself to the public road.

DESCRIPTION
OF THE
SCENERY OF THE LAKES.

SECTION FIRST.

VIEW OF THE COUNTRY AS FORMED BY NATURE.

AT Lucerne, in Switzerland, is shewn a Model of the Alpine country which encompasses the Lake of the four Cantons. The Spectator ascends a little platform, and sees mountains, lakes, glaciers, rivers, woods, waterfalls, and vallies, with their cottages, and every other object contained in them, lying at his feet; all things being represented in their appropriate colours. It may be easily conceived that this exhibition affords an exquisite delight to the imagination, tempting it to wander at will from valley to valley, from mountain to mountain, through the deepest recesses of the Alps. But it supplies also a more substantial pleasure: for the sublime and beautiful region, with all its hidden treasures, and their bearings and relations to each other, is thereby comprehended and understood at once.

Something of this kind, without touching upon minute details and individualities which would only confuse and embarrass, will here be attempted, in respect to the Lakes in the north of England, and the vales and mountains enclosing and surrounding them. The delineation, if tolerably executed, will, in some instances, communicate to the traveller, who has already seen the objects, new information; and will assist in giving to his recollections a more orderly arrangement than his own opportunities of observing may have permitted him to make; while it will be still more useful to the future traveller, by directing his attention at once to distinctions in things which, without such previous aid, a length of time only could enable him to discover. It is hoped, also, that this Essay may become generally serviceable, by leading to habits of more exact and considerate observation than, as far as the writer knows, have hitherto been applied to local scenery.

To begin, then, with the main outlines of the country;— I know not how to give the reader a distinct image of these more readily, than by requesting him to place himself with me, in imagination, upon some given point; let it be the top of either of the mountains, Great Gavel, or Scawfell; or, rather, let us suppose our station to be a cloud hanging midway between those two mountains, at not more than half a mile's distance from the summit of each, and not many yards above

their highest elevation; we shall then see stretched at our feet a number of vallies, not fewer than eight, diverging from the point, on which we are supposed to stand, like spokes from the nave of a wheel. First, we note, lying to the south-east, the vale of Langdale*, which will conduct the eye to the long lake of Winandermere, stretched nearly to the sea; or rather to the sands of the vast bay of Morcamb, serving here for the rim of this imaginary wheel;—let us trace it in a direction from the south-east towards the south, and we shall next fix our eyes upon the vale of Coniston, running up likewise from the sea, but not (as all the other vallies do) to the nave of the wheel, and therefore it may be not inaptly represented as a broken spoke sticking in the rim. Looking forth again, with an inclination towards the west, we see immediately at our feet the vale of Duddon, in which is no lake, but a copious stream winding among fields, rocks, and mountains, and terminating its course in the sands of Duddon. The fourth vale, next to be observed, viz. that of the Esk, is of the same general character as the last, yet beautifully discriminated from it by peculiar features. Its stream passes under the woody steep upon which stands Muncaster Castle, the ancient seat of the Penningtons,

* Anciently spelt Langden, and so called by the old inhabitants to this day—*dean*, from which the latter part of the word is derived, being in many parts of England a name for a valley.

and after forming a short and narrow æstuary enters the sea below the small town of Raven-glass. Next, almost due west, look down into, and along the deep valley of Wastdale, with its little chapel and half a dozen neat dwellings scattered upon a plain of meadow and corn-ground intersected with stone walls apparently innumerable, like a large piece of lawless patch-work, or an array of mathematical figures, such as in the ancient schools of geometry might have been sportively and fantastically traced out upon sand. Beyond this little fertile plain lies, within a bed of steep mountains, the long, narrow, stern, and desolate lake of Wastdale; and, beyond this, a dusky tract of level ground conducts the eye to the Irish Sea. The stream that issues from Wast-water is named the Irt, and falls into the æstuary of the river Esk. Next comes in view Ennerdale, with its lake of bold and somewhat savage shores. Its stream, the Ehen or Enna, flowing through a soft and fertile country, passes the town of Egremont, and the ruins of the castle,—then, seeming, like the other rivers, to break through the barrier of sand thrown up by the winds on this tempestuous coast, enters the Irish Sea. The vale of Buttermere, with the lake and village of that name, and Crummock-water, beyond, next present themselves. We will follow the main stream, the Coker, through the fertile and beautiful vale of Lorton, till it is lost in the Derwent, below the noble ruins of Cocker-

mouth Castle. Lastly, Borrowdale, of which the vale of Keswick is only a continuation, stretching due north, brings us to a point nearly opposite to the vale of Winandermere with which we began. From this it will appear, that the image of a wheel, thus far exact, is little more than one half complete; but the deficiency on the eastern side may be supplied by the vales of Wytheburn, Ulswater, Hawswater, and the vale of Grasmere and Rydal; none of these, however, run up to the central point between Great Gavel and Scawfell. From this, hitherto our central point, take a flight of not more than four or five miles eastward to the ridge of Helvellyn, and you will look down upon Wytheburn and St. John's Vale, which are a branch of the vale of Keswick; upon Ulswater, stretching due east:— and not far beyond to the south-east (though from this point not visible) lie the vale and lake of Hawswater; and lastly, the vale of Grasmere, Rydal, and Ambleside, brings you back to Winandermere, thus completing, though on the eastern side in a somewhat irregular manner, the representative figure of the wheel.

Such, concisely given, is the general topographical view of the country of the Lakes in the north of England; and it may be observed, that, from the circumference to the centre, that is, from the sea or plain country to the mountain stations specified, there is — in the several ridges that enclose these vales, and divide them from each other, I mean in the

forms and surfaces, first of the swelling grounds, next of the hills and rocks, and lastly of the mountains — an ascent of almost regular gradation, from elegance and richness, to their highest point of grandeur and sublimity. It follows therefore from this, first, that these rocks, hills, and mountains, must present themselves to view in stages rising above each other, the mountains clustering together towards the central point; and next, that an observer familiar with the several vales, must, from their various position in relation to the sun, have had before his eyes every possible embellishment of beauty, dignity, and splendour, which light and shadow can bestow upon objects so diversified. For example, in the vale of Winandermere, if the spectator looks for gentle and lovely scenes, his eye is turned towards the south; if for the grand, towards the north: in the vale of Keswick, which (as hath been said) lies almost due north of this, it is directly the reverse. Hence, when the sun is setting in summer far to the north-west, it is seen, by the spectator from the shores or breast of Winandermere, resting among the summits of the loftiest mountains, some of which will perhaps be half or wholly hidden by clouds, or by the blaze of light which the orb diffuses around it; and the surface of the lake will reflect before the eye correspondent colours through every variety of beauty, and through all degrees of splendour. In the vale of Keswick, at the same period, the sun sets

over the humbler regions of the landscape; and showers down upon *them* the radiance which at once veils and glorifies, — sending forth, meanwhile, broad streams of rosy, crimson, purple, or golden light, towards the grand mountains in the south and south-east, which, thus illuminated, with all their projections and cavities, and with an intermixture of solemn shadows, are seen distinctly through a cool and clear atmosphere. Of course, there is as marked a difference between the *noontide* appearance of these two opposite vales. The bedimming haze that overspreads the south, and the clear atmosphere and determined shadows of the clouds in the north, at the same time of the day, are each seen in these several vales, with a contrast as striking. The reader will easily conceive in what degree the intermediate vales partake of a kindred variety.

I do not indeed know any tract of country in which, within so narrow a compass, may be found an equal variety in the influences of light and shadow upon the sublime or beautiful features of landscape; and it is owing to the combined circumstances to which the reader's attention has been directed. From a point between Great Gavel and Scawfell, a shepherd would not require more than an hour to descend into any one of eight of the principal vales by which he would be surrounded; and all the others lie (with the exception of Haws-water) at but a small distance. Yet, though clustered together, every valley has its distinct

and separate character; in some instances, as if they had been formed in studied contrast to each other, and in others with the united pleasing differences and resemblances of a sisterly rivalry. This concentration of interest gives to the country a decided superiority over the most attractive districts of Scotland and Wales, especially for the pedestrian traveller. In Scotland and Wales are found, undoubtedly, individual scenes, which, in their several kinds, cannot be excelled. But, in Scotland, particularly, what long tracts of desolate country intervene! so that the traveller, when he reaches a spot deservedly of great celebrity, would find it difficult to determine how much of his pleasure is owing to excellence inherent in the landscape itself; and how much to an instantaneous recovery from an oppression left upon his spirits by the barrenness and desolation through which he has passed.

But to proceed with our survey; — and, first, of the MOUNTAINS. Their *forms* are endlessly diversified, sweeping easily or boldly in simple majesty, abrupt and precipitous, or soft and elegant. In magnitude and grandeur they are individually inferior to the most celebrated of those in some other parts of this island; but, in the combinations which they make, towering above each other, or lifting themselves in ridges like the waves of a tumultuous sea, and in the beauty and variety of their surfaces and colours, they are surpassed by none.

The general *surface* of the mountains is turf,

rendered rich and green by the moisture of the climate. Sometimes the turf, as in the neighbourhood of Newlands, is little broken, the whole covering being soft and downy pasturage. In other places rocks predominate; the soil is laid bare by torrents and burstings of water from the sides of the mountains in heavy rains; and not unfrequently their perpendicular sides are seamed by ravines (formed also by rains and torrents) which, meeting in angular points, entrench and scar the surface with numerous figures like the letters W. and Y.

In the ridge that divides Eskdale from Wasdale, granite is found; but the MOUNTAINS are for the most part composed of the stone by mineralogists termed schist, which, as you approach the plain country, gives place to limestone and free-stone; but schist being the substance of the mountains, the predominant colour of their rocky parts is bluish, or hoary grey—the general tint of the lichens with which the bare stone is encrusted. With this blue or grey colour is frequently intermixed a red tinge, proceeding from the iron that interveins the stone, and impregnates the soil. The iron is the principle of decomposition in these rocks; and hence, when they become pulverized, the elementary particles crumbling down, overspread in many places the steep and almost precipitous sides of the mountains with an intermixture of colours, like the compound hues of a dove's neck. When in the heat of advancing summer, the fresh green

tint of the herbage has somewhat faded, it is again revived by the appearance of the fern profusely spread over the same ground: and, upon this plant, more than upon any thing else, do the changes which the seasons make in the colouring of the mountains depend. About the first week in October, the rich green, which prevailed through the whole summer, is usually passed away. The brilliant and various colours of the fern are then in harmony with the autumnal woods; bright yellow or lemon colour, at the base of the mountains, melting gradually, through orange, to a dark russet brown towards the summits, where the plant, being more exposed to the weather, is in a more advanced state of decay. Neither heath nor furze are *generally* found upon the *sides* of these mountains, though in many places they are adorned by those plants, so beautiful when in flower. We may add, that the mountains are of height sufficient to have the surface towards the summit softened by distance, and to imbibe the finest aërial hues. In common also with other mountains, their apparent forms and colours are perpetually changed by the clouds and vapours which float round them: the effect indeed of mist or haze, in a country of this character, is like that of magic. I have seen six or seven ridges rising above each other, all created in a moment by the vapours upon the side of a mountain, which, in its ordinary appearance, shewed not a projecting point to furnish even a hint for such an operation.

I will take this opportunity of observing, that they who have studied the appearances of nature feel that the superiority, in point of visual interest, of mountainous over other countries — is more strikingly displayed in winter than in summer. This, as must be obvious, is partly owing to the *forms* of the mountains, which, of course, are not affected by the seasons; but also, in no small degree, to the greater variety that exists in their winter than their summer *colouring*. This variety is such, and so harmoniously preserved, that it leaves little cause of regret when the splendour of autumn is passed away. The oak-coppices, upon the sides of the mountains, retain russet leaves; the birch stands conspicuous with its silver stem and puce-coloured twigs; the hollies, with green leaves and scarlet berries, have come forth to view from among the deciduous trees, whose summer foliage had concealed them: the ivy is now plentifully apparent upon the stems and boughs of the trees, and upon the steep rocks. In places of the deep summer-green of the herbage and fern, many rich colours play into each other over the surface of the mountains; turf (the tints of which are interchangeably tawny-green, olive, and brown,) beds of withered fern, and grey rocks, being harmoniously blended together. The mosses and lichens are never so fresh and flourishing as in winter, if it be not a season of frost; and their minute beauties prodigally adorn the foreground. Wherever we turn, we find these

productions of nature, to which winter is rather favourable than unkindly, scattered over the walls, banks of earth, rocks, and stones, and upon the trunks of trees, with the intermixture of several species of small fern, now green and fresh; and, to the observing passenger, their forms and colours are a source of inexhaustible admiration. Add to this the hoar-frost and snow, with all the varieties they create, and which volumes would not be sufficient to describe. I will content myself with one instance of the colouring produced by snow, which may not be uninteresting to painters. It is extracted from the memorandum-book of a friend; and for its accuracy I can speak, having been an eye-witness of the appearance. "I observed," says he, "the beautiful effect of the drifted snow upon the mountains, and the perfect *tone* of colour. From the top of the mountains downwards a rich olive was produced by the powdery snow and the grass, which olive was warmed with a little brown, and in this way harmoniously combined, by insensible gradations, with the white. The drifting took away the monotony of snow; and the whole vale of Grasmere, seen from the terrace walk in Easedale, was as varied, perhaps more so, than even in the pomp of autumn. In the distance was Loughrigg-Fell, the basin-wall of the lake: this, from the summit downward, was a rich orange-olive; then the lake of a bright olive-green, nearly the same tint as the snow-powdered mountain

tops and high slopes in Easedale ; and lastly, the church, with its firs, forming the centre of the view. Next to the church came nine distinguishable hills, six of them with woody sides turned towards us, all of them oak-copses with their bright red leaves and snow-powdered twigs ; these hills — so variously situated in relation to each other, and to the view in general, so variously powdered, some only enough to give the herbage a rich brown tint, one intensely white and lighting up all the others — were yet so placed, as in the most inobtrusive manner to harmonise by contrast with a perfect naked, snowless bleak summit in the far distance.”

Having spoken of the forms, surface, and colour of the mountains, let us descend into the VALES. Though these have been represented under the general image of the spokes of a wheel, they are, for the most part, winding ; the windings of many being abrupt and intricate. And, it may be observed, that, in one circumstance, the general shape of them all has been determined by that primitive conformation through which so many became receptacles of lakes. For they are not formed, as are most of the celebrated Welsh vallies, by an approximation of the sloping bases of the opposite mountains towards each other, leaving little more between than a channel for the passage of a hasty river ; but the bottom of of these vallies is mostly a spacious and gently declining area, apparently level as the floor

of a temple, or the surface of a lake, and broken in many cases, by rocks and hills, which rise up like islands from the plain. In such of the vallies as make many windings, these level areas open upon the traveller in succession, divided from each other sometimes by a mutual approximation of the hills, leaving only passage for a river, sometimes by correspondent windings, without such approximation; and sometimes by a bold advance, of one mountain towards that which is opposite it. It may here be observed with propriety that the several rocks and hills, which have been described as rising up like islands from the level area of the vale, have regulated the choice of the inhabitants in the situation of their dwellings. Where none of these are found, and the inclination of the ground is not sufficiently rapid easily to carry off the waters, (as in the higher part of Langdale, for instance,) the houses are not sprinkled over the middle of the vales, but confined to their sides, being placed merely so far up the mountain as to be protected from the floods. But where these rocks and hills have been scattered over the plain of the vale, (as in Grasmere, Donnerdale, Eskdale, &c.) the beauty which they give to the scene is much heightened by a single cottage, or cluster of cottages, that will be almost always found under them, or upon their sides; dryness and shelter having tempted the Dalesmen to fix their habitations there.

I shall now speak of the LAKES of this country. The form of the lake is most perfect when, like Derwent-water, and some of the smaller lakes, it least resembles that of a river ; — I mean, when being looked at from any given point where the whole may be seen at once, the width of it bears such proportion to the length, that, however the outline may be diversified by far-receding bays, it never assumes the shape of a river, and is contemplated with that placid and quiet feeling which belongs peculiarly to the lake— as a body of still water under the influence of no current ; reflecting therefore the clouds, the light, and all the imagery of the sky and surrounding hills ; expressing also and making visible the changes of the atmosphere, and motions of the lightest breeze, and subject to agitation only from the winds—

———The visible scene

Would enter unawares into his mind
 With all its solemn imagery, its rocks,
 Its woods, and that uncertain heaven received
 Into the bosom of the *steady* lake !

It must be noticed, as a favourable characteristic of the lakes of this country, that, though several of the largest, such as Winandermere, Ulswater, Hawswater, do, when the whole length of them is commanded from an elevated point, loose somewhat of the peculiar form of the lake, and assume the resemblance of a magnificent river ; yet, as their shape is winding,

(particularly that of Ulswater and Hawswater) when the view of the whole is obstructed by those barriers which determine the windings, and the spectator is confined to one reach, the appropriate feeling is revived; and one lake may thus in succession present to the eye the essential characteristic of many. But, though the forms of the large lakes have this advantage, it is nevertheless favourable to the beauty of the country that the largest of them are comparatively small; and that the same vale generally furnishes a succession of lakes, instead of being filled with one. The vales in North Wales, as hath been observed, are not formed for the reception of lakes; those of Switzerland, Scotland, and this part of the North of England, *are* so formed; but, in Switzerland and Scotland, the proportion of diffused water is often too great, as at the lake of Geneva for instance, and in most of the Scotch lakes. No doubt it sounds magnificent and flatters the imagination, to hear at a distance of expanses of water so many leagues in length and miles in width; and such ample room may be delightful to the fresh-water sailor, scudding with a lively breeze amid the rapidly-shifting scenery. But, who ever travelled along the banks of Loch-Lomond, variegated as the lower part is by islands, without feeling that a speedier termination of the long vista of blank water would be acceptable; and without wishing for an interposition of green meadows, trees, and cottages, and a sparkling

stream to run by his side? In fact, a notion, of grandeur, as connected with magnitude, has seduced persons of taste into a general mistake upon this subject. It is much more desirable, for the purposes of pleasure, that lakes should be numerous, and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances. To illustrate this by one instance:—how pleasing is it to have a ready and frequent opportunity of watching, at the outlet of a lake, the stream pushing its way among the rocks in lively contrast with the stillness from which it has escaped; and how amusing to compare its noisy and turbulent motions with the gentle playfulness of the breezes, that may be starting up or wandering here and there over the faintly-rippled surface of the broad water! I may add, as a general remark, that, in lakes of great width, the shores cannot be distinctly seen at the same time, and therefore contribute little to mutual illustration and ornament; and, if the opposite shores are out of sight of each other, like those of the American and Asiatic lakes, then unfortunately the traveller is reminded of a nobler object; he has the blankness of a sea-prospect without the grandeur and accompanying sense of power.

As the comparatively small size of the lakes in the North of England is favourable to the production of variegated landscape, their *boundary-line* also is for the most part gracefully

or boldly indented. That uniformity which prevails in the primitive frame of the lower grounds among all chains or clusters of mountains where large bodies of still water are bedded, is broken by the *secondary* agents of nature, ever at work to supply the deficiencies of the mould in which things were originally cast. Using the word *deficiencies*, I do not speak with reference to those stronger emotions which a region of mountains is peculiarly fitted to excite. The bases of those huge barriers may run for a long space in straight lines, and these parallel to each other; the opposite sides of a profound vale may ascend as exact counterparts, or in mutual reflection, like the billows of a troubled sea; and the impression be, from its very simplicity, more awful and sublime. ★ Sublimity is the result of Nature's first great dealings with the superficies of the earth; but the general tendency of her subsequent operations is towards the production of beauty; by a multiplicity of symmetrical parts uniting in a consistent whole. This is every where exemplified along the margins of these lakes. Masses of rock, that have been precipitated from the heights into the area of waters, lie in some places like stranded ships; or have acquired the compact structure of jutting piers; or project in little peninsulas crested with native wood. The smallest rivulet — one whose silent influx is scarcely noticeable in a season of dry weather — so faint is the dimple made by it on the surface of the smooth lake — will

be found to have been not useless in shaping, by its deposits of gravel and soil in time of flood, a curve that would not otherwise have existed. But the more powerful brooks, encroaching upon the level of the lake, have, in course of time, given birth to ample promontories of sweeping outline that contrasts boldly with the longitudinal base of the steeps on the opposite shore; while their flat or gently-sloping surfaces never fail to introduce, into the midst of desolation and barrenness, the elements of fertility, even where the habitations of men may not have been raised. These alluvial promontories, however, threaten, in some places, to bisect the waters which they have long adorned; and, in course of ages, they will cause some of the lakes to dwindle into numerous and insignificant pools; which, in their turn, will finally be filled up. But, checking these intrusive calculations, let us rather be content with appearances as they are, and pursue in imagination the meandering shores, whether rugged steeps, admitting of no cultivation, descend into the water; or gently-sloping lawns and woods, or flat and fertile meadows stretch between the margin of the lake and the mountains. Among minuter recommendations will be noticed, especially along bays exposed to the setting-in of strong-winds, the curved rim of fine blue gravel, thrown up in course of time by the waves, half of it perhaps gleaming from under the water, and the corresponding half of a lighter

hue; and in other parts bordering the lake, groves, if I may so call them, of reeds and bulrushes; or plots of water-lilies lifting up their large target-shaped leaves to the breeze, while the white flower is heaving upon the wave.

To these may naturally be added the birds that enliven the waters. Wild-ducks in spring-time hatch their young in the islands, and upon reedy shores; — the sand-piper, flitting along the stony margins, by its restless note attracts the eye to motions as restless: — upon some jutting rock, or at the edge of a smooth meadow, the stately heron may be descried with folded wings, that might seem to have caught their delicate hue from the blue waters, by the side of which she watches for her sustenance. In winter, the lakes are sometimes resorted to by wild swans; and in that season habitually by widgeons, goldings, and other aquatic fowl of the smaller species. Let me be allowed the aid of verse to describe the evolutions which these visitants sometimes perform, on a fine day towards the close of winter.

Mark how the feather'd tenants of the flood,
 With grace of motion that might scarcely seem
 Inferior to angelical, prolong
 Their curious pastime! shaping in mid air
 (And sometimes with ambitious wing that soars
 High as the level of the mountain tops,)
 A circuit ampler than the lake beneath,
 Their own domain; — but ever, while intent
 On tracing and retracing that large round,
 Their jubilant activity evolves

Hundreds of curves and circlets, to and fro,
 Upward and downward, progress intricate
 Yet unperplex'd, as if one spirit swayed
 Their indefatigable flight. — 'Tis done —
 Ten times, or more, I fancied it had ceased ;
 But lo ! the vanish'd company again
 Ascending ; — they approach — I hear their wings
 Faint, faint, at first, and then an eager sound
 Past in a moment — and as faint again !
 They tempt the sun to sport amid their plumes ;
 They tempt the water or the gleaming ice,
 To shew them a fair image ; — 'tis themselves,
 Their own fair forms, upon the glimmering plain,
 Painted more soft and fair as they descend
 Almost to touch ; — then up again aloft,
 Up with a sally and a flash of speed,
 As if they scorn'd both resting-place and rest !

The ISLANDS, dispersed among these lakes, are neither so numerous nor so beautiful as might be expected from the account that has been given of the manner in which the level areas of the vales are so frequently diversified by rocks, hills, and hillocks, scattered over them ; nor are they ornamented (as are several of the lakes in Scotland and Ireland) by the remains of castles or other places of defence ; nor with the still more interesting ruins of religious edifices. Every one must regret that scarcely a vestige is left of the Oratory, consecrated to the Virgin, which stood upon Chapel-Holm in Windermere, and that the Chantry has disappeared, where mass used to be sung, upon St. Herbert's Island, Derwent-water. The islands of the last-mentioned lake are neither fortunately placed

✓ nor of pleasing shape; but if the wood upon them were managed with more taste, they might become interesting features in the landscape. There is a beautiful cluster on Winandermere; a pair pleasingly contrasted upon Rydal; nor must the solitary green island of Grasmere be forgotten. In the bosom of each of the lakes of Ennerdale and Devockwater is a single rock, which, owing to its neighbourhood to the sea, is —

“ The haunt of cormorants and sea-mew’s clang,”

a music well suited to the stern and wild character of the several scenes! It may be worth while here to mention (not as an object of beauty, but of curiosity) that there occasionally appears above the surface of Derwentwater, and always in the same place, a considerable tract of spongy ground covered with aquatic plants, which is called the Floating, but with more propriety might be named the Buoyant, Island; and, on one of the pools near the lake of Esthwaite, may sometimes be seen a mossy Islet, with trees upon it, shifting about before the wind, a *lusus naturæ* frequent on the great rivers of America, and not unknown in other parts of the world.

—————“ *fas habeas invisere Tiburis arva,
Albunæque lacum, atque umbras terrasque natantes.*”*

* See that admirable Idyllium, the *Catillus* and *Salia*, of Landor.

This part of the subject may be concluded with observing — that, from the multitude of brooks and torrents that fall into these lakes, and of internal springs by which they are fed, and which circulate through them like veins, they are truly living lakes, “*vivi lacus* ;” and are thus discriminated from the stagnant and sullen pools frequent among mountains that have been formed by volcanoes, and from the shallow meres found in flat and fenny countries. The water is also of crystalline purity ; so that, if it were not for the reflections of the incumbent mountains by which it is darkened, a delusion might be felt, by a person resting quietly in a boat on the bosom of Winandermere or Derwent-water, similar to that which Carver so beautifully describes when he was floating alone in the middle of lake Erie or Ontario, and could almost have imagined that his boat was suspended in an element as pure as air, or rather that the air and water were one.

Having spoken of Lakes I must not omit to mention, as a kindred feature of this country, those bodies of still water called TARNS. In the economy of nature these are useful, as auxiliars to Lakes ; for if the whole quantity of water which falls upon the mountains in time of storm were poured down upon the plains without intervention, in some quarters, of such receptacles, the habitable grounds would be much more subject than they are to inundation. But, as some of the collateral

brooks spend their fury, finding a free course toward and also down the channel of the main stream of the vale before those that have to pass through the higher tarns and lakes have filled their several basins, a gradual distribution is effected ; and the waters thus reserved, instead of uniting, to spread ravage and deformity, with those which meet with no such detention, contribute to support, for a length of time, the vigour of many streams without a fresh fall of rain. Tarns are found in some of the vales, and are numerous upon the mountains. A Tarn, in a *Vale*, implies, for the most part, that the bed of the vale is not happily formed ; that the water of the brooks can neither wholly escape, nor diffuse itself over a large area. Accordingly, in such situations, Tarns are often surrounded by an unsightly tract of boggy ground ; but this is not always the case, and in the cultivated parts of the country, when the shores of the Tarn are determined, it differs only from the Lake in being smaller, and in belonging mostly to a smaller valley, or circular recess. Of this class of miniature lakes, Loughrigg Tarn, near Grasmere, is the most beautiful example. It has a margin of green firm meadows, of rocks, and rocky woods, a few reeds here, a little company of water-lilies there, with beds of gravel or stone beyond ; a tiny stream issuing neither briskly nor sluggishly out of it ; but its feeding rills, from the shortness of their course, so small as to be scarcely visible. Five

or six cottages are reflected in its peaceful bosom ; rocky and barren steeps rise up above the hanging enclosures ; and the solemn pikes of Langdale overlook, from a distance, the low cultivated ridge of land that forms the northern boundary of this small, quiet, and fertile domain. The *mountain* Tarns can only be recommended to the notice of the inquisitive traveller who has time to spare. They are difficult of access and naked ; yet some of them are, in their permanent forms, very grand ; and there are accidents of things which would make the meanest of them interesting. At all events, one of these pools is an acceptable sight to the mountain wanderer ; not merely as an incident that diversifies the prospect, but as forming in his mind a centre or conspicuous point to which objects, otherwise disconnected or insubordinated, may be referred. Some few have a varied outline, with bold heath-clad promontories ; and, as they mostly lie at the foot of a steep precipice, the water where the sun is not shining upon it, appears black and sullen ; and, round the margin, huge stones and masses of rock are scattered ; some defying conjecture as to the means by which they came thither ; and others obviously fallen from on high—the contribution of ages ! A not unpleasing sadness is induced by this perplexity, and these images of decay ; while the prospect of a body of pure water unattended with groves and other cheerful rural images by which fresh water is usually

accompanied, and unable to give furtherance to the meagre vegetation around it — excites a sense of some repulsive power strongly put forth, and thus deepens the melancholy natural to such scenes. Nor is the feeling of solitude often more forcibly or more solemnly impressed than by the side of one of these mountain pools: though desolate and forbidding, it seems a distinct place to repair to; yet where the visitants must be rare, and there can be no disturbance. Water-fowl flock hither; and the lonely Angler may here be seen; but the imagination, not content with this scanty allowance of society, is tempted to attribute a voluntary power to every change which takes place in such a spot, whether it be the breeze that wanders over the surface of the water, or the splendid lights of evening resting upon it in the midst of awful precipices.

“There, sometimes does a leaping fish
Send through the tarn a lonely cheer;
The crags repeat the raven’s croak
In symphony austere:
Thither the rainbow comes, the cloud,
And mists that spread the flying shroud,
And sunbeams, and the sounding blast.”

It will be observed that this country is bounded on the south and east by the sea, which combines beautifully, from many elevated points, with the inland scenery; and, from the bay of Morcamb, the sloping shores and back-ground of distant mountains are seen,

composing pictures equally distinguished for amenity and grandeur. But the æstuaries on this coast are in a great measure bare at low water* ; and there is no instance of the sea running far up among the mountains, and mingling with the Lakes, which are such in the strict and usual sense of the word, being of fresh water. Nor have the streams, from the shortness of their course, time to acquire that body of water necessary to confer upon them much majesty. In fact, the most considerable, while they continue in the mountain and lake-country, are rather large brooks than rivers. The water is perfectly pellucid, through which in many places are seen, to a great depth, their beds of rock, or of blue gravel, which give to the water itself an exquisitely cerulean colour: this is particularly striking in the rivers Derwent and Duddon, which may be compared, such and so various are their beauties, to any two rivers of equal length of course in any country. The number of the torrents and smaller brooks is infinite, with their water-falls and water-breaks; and they need not here be described. I will only ob-

* In fact there is not an instance of a harbour on the Cumberland side of the Solway frith that is not dry at low water; that of Ravenglass, at the mouth of the Esk, as a natural harbour is much the best. The Sea appears to have been retiring slowly for ages from this coast. From Whitehaven to St. Bees extends a track of level ground, about five miles in length, which formerly must have been under salt water, so as to have made an island of the high ground that stretches between it and the Sea.

serve that, as many, even of the smallest rills, have either found, or made for themselves, recesses in the sides of the mountains or in the vales, they have tempted the primitive inhabitants to settle near them for shelter; and hence, cottages so placed, by seeming to withdraw from the eye, are the more endeared to the feelings.

The Woods consist chiefly of oak, ash, and birch, and here and there Wych-elm, with underwood of hazle, the white and black thorn, and hollies; in moist places alders and willows abound; and yews among the rocks. Formerly the whole country must have been covered with wood to a great height up the mountains; where native Scotch firs* must have grown in great profusion, as they do in the northern part of Scotland to this day. But not one of these old inhabitants has existed, perhaps, for some hundreds of years; the beautiful traces, however, of the universal sylvan† appearance the country formerly had, yet survive in the native coppice-woods that have been protected by inclosures, and also in the forest-trees and hollies, which, though disappearing fast, are yet

* This species of fir is in character much superior to the American which has usurped its place: Where the fir is planted for ornament, let it be by all means of the aboriginal species, which can only be procured from the Scotch nurseries.

† A squirrel (so I have heard the old people of Wytheburn say) might have gone from their chapel to Keswick without alighting on the ground.

scattered both over the inclosed and uninclosed parts of the mountains. The same is expressed by the beauty and intricacy with which the fields and coppice-woods are often intermingled : the plough of the first settlers having followed naturally the veins of richer, dryer, or less stony soil ; and thus it has shaped out an intermixture of wood and lawn, with a grace and wildness which it would have been impossible for the hand of studied art to produce. Other trees have been introduced within these last fifty years, such as beeches, larches, limes, &c. and plantations of firs, seldom with advantage, and often with great injury to the appearance of the country ; but the sycamore (which I believe was brought into this island from Germany, not more than two hundred years ago) has long been the favourite of the cottagers ; and, with the fir, has been chosen to screen their dwellings : and is sometimes found in the fields whither the winds or the waters may have carried its seeds.

The want most felt, however, is that of timber trees. There are a few *magnificent* ones to be found near any of the lakes ; and unless greater care be taken, there will, in a short time, scarcely be left an ancient oak that would repay the cost of felling. The neighbourhood of Rydal, notwithstanding the havoc which has been made, is yet nobly distinguished. In the woods of Lowther, also, is found an almost matchless store of ancient trees, and the majesty and wildness of the native forest.

Among the smaller vegetable ornaments must be reckoned the bilberry, a ground plant, never so beautiful as in early spring, when it is seen under bare or budding trees, that imperfectly intercept the sun-shine, covering the rocky knolls with a pure mantle of fresh verdure, more lively than the herbage of the open fields;—the broom that spreads luxuriantly along rough pastures, and in the month of June interveins the steep copses with its golden blossoms;—and the juniper, a rich evergreen, that thrives in spite of cattle, upon the uninclosed parts of the mountains:—the Dutch myrtle diffuses fragrance in moist places; and there is an endless variety of brilliant flowers in the fields and meadows, which, if the agriculture of the country were more carefully attended to, would disappear. Nor can I omit again to notice the lichens and mosses: their profusion, beauty, and variety, exceed those of any other country I have seen.

It may now be proper to say a few words respecting climate, and “skiey influences,” in which this region, as far as the character of its landscapes is affected by them, may, upon the whole, be considered fortunate. The country is, indeed, subject to much bad weather, and it has been ascertained that twice as much rain falls here as in many parts of the island; but the number of black drizzling days, that blot out the face of things, is by no means *proportionally* great. Nor is a continuance of thick, flagging, damp air, so common as in the West

of England and Ireland. The rain here comes down heartily, and is frequently succeeded by clear, bright weather, when every brook is vocal, and every torrent sonorous; brooks and torrents, which are never muddy, even in the heaviest floods, except, after a drought, they happen to be defiled for a short time by waters that have swept along dusty roads, or have broken out into ploughed fields. Days of unsettled weather, with partial showers, are very frequent; but the showers, darkening, or brightening, as they fly from hill to hill, are not less grateful to the eye than finely interwoven passages of gay and sad music are touching to the ear. Vapours exhaling from the lakes and meadows after sun-rise, in a hot season, or, in moist weather, brooding upon the heights, or descending towards the valleys with inaudible motion, give a visionary character to everything around them; and are in themselves so beautiful, as to dispose us to enter into the feelings of those simple nations (such as the Laplanders of this day) by whom they are taken for guardian deities of the mountains; or to sympathise with others who have fancied these delicate apparitions to be the spirits of their departed ancestors. Akin to these are fleecy clouds resting upon the hill-tops; they are not easily managed in picture, with their accompaniments of blue sky; but how glorious are they in nature! how pregnant with imagination for the poet! and the height of the Cumbrian mountains is sufficient to exhibit

daily and hourly instances of those mysterious attachments. Such clouds, cleaving to their stations, or lifting up suddenly their glittering heads from behind rocky barriers, or hurrying out of sight with speed of the sharpest edge—will often tempt an inhabitant to congratulate himself on belonging to a country of mists and clouds and storms, and make him think of the blank sky of Egypt, and of the cerulean vacancy of Italy, as an unanimated and even a sad spectacle. The atmosphere, however, as in every country subject to much rain, is frequently unfavourable to landscape, especially when keen winds succeed the rain which are apt to produce coldness, spottiness, and an unmeaning or repulsive detail in the distance;—a sunless frost, under a canopy of leaden and shapeless clouds, is, as far as it allows things to be seen, equally disagreeable.

It has been said that in human life there are moments worth ages. In a more subdued tone of sympathy may we affirm, that in the climate of England there are, for the lover of nature, days which are worth whole months, — I might say — even years. One of these favoured days sometimes occurs in spring-time, when that soft air is breathing over the blossoms and new-born verdure, which inspired Buchanan with his beautiful Ode to the first of May; the air, which, in the luxuriance of his fancy, he likens to that of the golden age, — to that which gives motion to the funereal cypresses on the banks of Lethe; — to the air

which is to salute beatified spirits when expiatory fires shall have consumed the earth with all her habitations. But it is in autumn that days of such affecting influence most frequently intervene ; — the atmosphere seems refined, and the sky rendered more crystalline, as the vivifying heat of the year abates ; the lights and shadows are more delicate ; the coloring is richer and more finely harmonized ; and, in this season of stillness, the ear being unoccupied, or only gently excited, the sense of vision becomes more susceptible of its appropriate enjoyments. A resident in a country like this which we are treating of, will agree with me, that the presence of a lake is indispensable to exhibit in perfection the beauty of one of these days ; and he must have experienced, while looking on the unruffled waters, that the imagination, by their aid, is carried into recesses of feeling otherwise impenetrable. The reason of this is, that the heavens are not only brought down into the bosom of the earth, but that the earth is mainly looked at, and thought of, through the medium of a purer element. The happiest times is when the equinoxial gales are departed ; but their fury may probably be called to mind by the sight of a few shattered boughs, whose leaves do not differ in colour from the faded foliage of the stately oaks from which these relics of the storm depend : all else speaks of tranquillity ; — not a breath of air, no restlessness of insects, and not a moving object perceptible —

except the clouds gliding in the depths of the lake, or the traveller passing along, an inverted image, whose motion seems governed by the quiet of a time, to which its archetype, the living person, is, perhaps, insensible:— or it may happen, that the figure of one of the larger birds, a raven or a heron, is crossing silently among the reflected clouds, while the voice of the real bird, from the element aloft, gently awakens in the spectator the recollection of appetites and instincts, pursuits and occupations, that deform and agitate the world, — yet have no power to prevent nature from putting on an aspect capable of satisfying the most intense cravings for the tranquil, the lovely, and the perfect, to which man, the noblest of her creatures, is subject.

Thus far, of climate, as influencing the feelings through its effect on the objects of sense. We may add, that whatever has been said upon the advantages derived to these scenes from a changeable atmosphere, would apply, perhaps still more forcibly, to their appearance under the varied solemnities of night. Milton, it will be remembered, has given a *clouded* moon to Paradise itself. In the night-season also, the narrowness of the vales, and comparative smallness of the lakes, are especially adapted to bring surrounding objects home to the eye and to the heart. The stars, taking their stations above the hill-tops, are contemplated from a spot like the Abyssinian recess of Rasselas, with much more touching inter-

est than they are likely to excite when looked at from an open country with ordinary undulations: and it must be obvious, that it is the *bays* only of large lakes that can present such contrasts of light and shadow as those of smaller dimensions display from every quarter. A deep contracted valley, with diffused waters, such a valley and plains level and wide as those of Chaldea, are the two extremes in which the beauty of the heavens and their connexion with the earth are most sensibly felt. Nor do the advantages I have been speaking of imply here an exclusion of the aerial effects of distance. These are insured by the height of the mountains, and are found, even in the narrowest vales, where they lengthen in perspective, or act (if the expression may be used) as telescopes for the open country.

The subject would bear to be enlarged upon: but I will conclude this section with a night-scene suggested by the Vale of Keswick. The Fragment is well known; but it gratifies me to insert it, as the Writer was one of the first who led the way to a worthy admiration of this country.

“ Now sunk the sun, now twilight sunk, and night
 Rode in her zenith; not a passing breeze
 Sigh'd to the grove, which in the midnight air
 Stood motionless, and in the peaceful floods
 Inverted hung: for now the billows slept
 Along the shore, nor heav'd the deep; but spread

A shining mirror to the moon's pale orb,
 Which, dim and waning, o'er the shadowy cliffs,
 The solemn woods, and spiry mountain tops,
 Her glimmering faintness threw : now every eye,
 Oppress'd with toil, was drown'd in deep repose,
 Save that the unseen Shepherd in his watch,
 Propp'd on his crook, stood listening by the fold,
 And gaz'd the starry vault, and pendant moon ;
 Nor voice, nor sound, broke on the deep serene ;
 But the soft murmur of soft-gushing rills,
 Forth issuing from the mountain's distant steep.
 (Unheard till now, and now scarce heard) proclaim'd
 All things at rest, and imag'd the still voice
 Of quiet, whispering in the ear of night."*

* Dr. Brown, the author of this fragment, was from his infancy brought up in Cumberland, and should have remembered that the practice of folding sheep by night is unknown among these mountains, and that the image of the Shepherd upon the watch is out of its place, and belongs only to countries, with a warmer climate, that are subject to ravages from beasts of prey. It is pleasing to notice a dawn of imaginative feeling in these verses. Tickel, a man of no common genius, chose, for the subject of a Poem, Kensington Gardens, in preference to the Banks of the Derwent, within a mile or two of which he was born. But this was in the reign of Queen Anne, or George the first. Progress must have been made in the interval ; though the traces of it, except in the works of Thomson and Dyer, are not very obvious.

SECTION SECOND.

ASPECT OF THE COUNTRY, AS AFFECTED BY ITS
INHABITANTS.

HITHERTO I have chiefly spoken of the features by which nature has discriminated this country from others. I will now describe, in general terms, in what manner it is indebted to the hand of man. What I have to notice on this subject will emanate most easily and perspicuously from a description of the ancient and present inhabitants, their occupations, their condition of life, the distribution of landed property among them, and the tenure by which it is holden.

The reader will suffer me here to recall to his mind the shapes of the vallies, and their position with respect to each other, and the forms and substance of the intervening mountains. He will people the vallies with lakes and rivers: the coves and sides of the mountains with pools and torrents; and will bound half of the circle which we have contemplated by the sands of the sea, or by the sea itself. He will conceive that, from the point upon which he stood, he looks down upon this scene before the country had been penetrated by any inhabitants:— to vary his sensations, and to break in upon their stillness, he will form

to himself an image of the tides visiting and re-visiting the friths, the main sea dashing against the bolder shore, the rivers pursuing their course to be lost in the mighty mass of waters. He may see or hear in fancy the winds sweeping over the lakes, or piping with a loud voice among the mountain peaks; and, lastly, may think of the primeval woods shedding and renewing their leaves with no human eye to notice, or human heart to regret or welcome the change. "When the first settlers entered this region (says an animated writer) they found it overspread with wood; forest trees, the fir, the oak, the ash, and the birch had skirted the fells, tufted the hills, and shaded the vallies, through centuries of silent solitude; the birds and beasts of prey reigned over the meeker species; and the *bellum inter omnia* maintained the balance of nature in the empire of beasts."

Such was the state and appearance of this region when the aboriginal colonists of the Celtic tribes were first driven or drawn towards it, and became joint tenants with the wolf, the boar, the wild bull, the red deer, and the leigh, a gigantic species of deer which has been long extinct; while the inaccessible crags were occupied by the falcon, the raven, and the eagle. The inner parts were too secluded, and of too little value, to participate much of the benefit of Roman manners; and though these conquerors encouraged the Britons to the improvement of their lands in the plain country

of Furness and Cumberland, they seem to have had little connexion with the mountains, except for military purposes, or in subservience to the profit they drew from the mines.

When the Romans retired from Great Britain, it is well known that these mountain-fastnesses furnished a protection to some unsubdued Britons, long after the more accessible and more fertile districts had been seized by the Saxon or Danish invader. A few, though distinct, traces of Roman forts or camps, as at Ambleside, and upon Dunmallet, and a few circles of rude stones attributed to the Druids,* are the

* It is not improbable that these circles were once numerous, and that many of them may yet endure in a perfect state, under no very deep covering of soil. A friend of the Author, while making a trench in a level piece of ground, not far from the banks of the Emont, but in no connection with that river, met with some stones which seemed to him formally arranged; this excited his curiosity, and proceeding, he uncovered a perfect circle of stones, from two to three or four feet high, with a *sanctum sanctorum*, — the whole a complete place of Druidical worship of small dimensions, having the same sort of relation to Stonehenge, Long Meg and her Daughters near the river Eden, and Karl Lofts near Shap (if this last be not Danish), that a rural chapel bears to a stately church, or to one of our noble cathedrals. This interesting little monument having passed, with the field in which it was found, into other hands, has been destroyed. It is much to be regretted, that the striking relic of antiquity at Shap has been in a great measure destroyed also.

The DAUGHTERS OF LONG MEG are placed not in an oblong, as the STONES OF SHAP, but in a perfect circle, eighty yards in diameter, and seventy-two in number,

only vestiges that remain upon the surface of the country, of these ancient occupants; and, as the Saxons and Danes, who succeeded to the possession of the villages and hamlets which had been established by the Britons, seem at first to have confined themselves to the open country, — we may descend at once to times long posterior to the conquest by the Normans, when their feudal polity was regularly established. We may easily conceive that these narrow dales and mountain sides,

and from above three yards high, to less than so many feet: a little way out of the circle stands **LONG MEG** herself — a single stone eighteen feet high.

When the Author first saw this monument, he came upon it by surprize, therefore might over-rate its importance as an object; but he must say, that though it is not to be compared with Stonehenge, he has not seen any other remains of those dark ages, which can pretend to rival it in singularity and dignity of appearance.

A weight of awe not easy to be borne
 Fell suddenly upon my spirit, cast
 From the dread bosom of the unknown past,
 When first I saw that sisterhood forlorn; —
 And Her, whose strength and stature seem to scorn
 The power of years — pre-eminent, and placed
 Apart, to overlook the circle vast.
 Speak, Giant-mother! tell it to the Morn,
 While she dispels the cumbrous shades of night;
 Let the Moon hear, emerging from a cloud,
 When, how, and wherefore, rose on British ground
 That wondrous Monument, whose mystic round
 Forth shadows, some have deemed, to mortal sight
 The inviolable God that tames the proud.

choaked up as they must have been with wood, lying out of the way of communication with other parts of the Island, and upon the edge of a hostile kingdom, could have little attraction for the high-born and powerful; especially as the more open parts of the country furnished positions for castles and houses of defence, sufficient to repel any of those sudden attacks, which, in the then rude state of military knowledge, could be made upon them. Accordingly, the more retired regions (and to such I am now confining myself) must have been neglected or shunned even by the persons whose baronial or signioral rights extended over them, and left, doubtless, partly as a place of refuge for outlaws and robbers, and partly granted out for the more settled habitation of a few vassals following the employment of shepherds or woodlanders. Hence these lakes and inner vallies are unadorned by any remains of ancient grandeur, castles, or monastic edifices, which are only found upon the skirts of the country, as Furness Abbey, Calder Abbey, the Priory of Lannercost, Gleaston Castle, — long ago a residence of the Flemings, — and the numerous ancient castles of the Cliffords, the Lucys, and the Dacres. On the southern side of these mountains, (especially in that part known by the name of Furness Fells, which is more remote from the borders,) the state of society would necessarily be more settled; though it also was fashioned, not a little, by its neighbourhood to a hostile king-

dom. We will, therefore, give a sketch of the economy of the Abbots in the distribution of lands among their tenants, as similar plans were doubtless adopted by other Lords, and as the consequences have affected the face of the country materially to the present day, being, in fact, one of the principal causes which give it such a striking superiority, in beauty and interest, over all other parts of the island.

“When the Abbots of Furness,” says an author before cited, “enfranchised their villains, and raised them to the dignity of customary tenants, the lands, which they had cultivated for their lord, were divided into whole tenements; each of which, besides the customary annual rent, was charged with the obligation of having in readiness a man completely armed for the king’s service on the borders, or elsewhere; each of these whole tenements was again subdivided into four equal parts; each villain had one; and the party tenant contributed his share to the support of the man of arms, and of other burdens. These divisions were not properly distinguished; the land remained mixed; each tenant had a share through all the arable and meadow-land, and common of pasture over all the wastes. These sub-tenements were judged sufficient for the support of so many families; and no further division was permitted. These divisions and sub-divisions were convenient at the time for which they were calculated: the land, so

parcelled out, was, of necessity more attended to, and the industry greater, when more persons were to be supported by the produce of it. The frontier of the kingdom, within which Furness was considered, was in a constant state of attack and defence; more hands, therefore, were necessary to guard the coast, to repel an invasion from Scotland, or make reprisals on the hostile neighbour. The dividing the lands in such manner as has been shown, increased the number of inhabitants, and kept them at home till called for: and, the land being mixed, and the several tenants united in equipping the plough, the absence of the fourth man was no prejudice to the cultivation of his land, which was committed to the care of three.

“While the villains of Low Furness were thus distributed over the land, and employed in agriculture; those of High Furness were charged with the care of flocks and herds, to protect them from the wolves which lurked in the thickets, and in winter to browse them with the tender sprouts of hollies and ash. This custom was not till lately discontinued in High Furness; and holly-trees were carefully preserved for that purpose when all other wood was cleared off; large tracts of common being so covered with these trees, as to have the appearance of a forest of hollies. At the Shepherd’s call, the flocks surrounded the holly-bush, and received the croppings at his hand, which they greedily nibbled up, bleating for

more. The Abbots of Furness enfranchised these pastoral vassals, and permitted them to enclose *quilletts* to their houses, for which they paid encroachment rent."—West's *Antiquities of Furness*.

However desirable, for the purposes of defence, a numerous population might be, it was not possible to make at once the same numerous allotments among the untilled vallies, and upon the sides of the mountains, as had been made in the cultivated plains. The enfranchised shepherd, or woodlander, having chosen there his place of residence, builds it of sods, or of the mountain-stone, and, with the permission of his lord, encloses, like Robinson Crusoe, a small croft or two immediately at his door for such animals as he wishes to protect. Others are happy to imitate his example, and avail themselves of the same privileges: and thus a population, mainly of Danish or Norse origin, as the dialect indicates, crept on towards the more secluded parts of the vallies. Chapels, daughters of some distant mother church, are first erected in the more open and fertile vales, as those of Bowness and Grasmere, offsets of Kendal: which again, after a period, as the settled population increases, become mother-churches to smaller edifices, planted, at length, in almost every dale throughout the country. The inclosures, formed by the tenantry, are for a long time confined to the home-steads; and the arable and meadow land of the vales is possessed in common field; the

several portions being marked out by stones, bushes, or trees: which portions, where the custom has survived, to this day are called *dales*, from the word *deylen*, to distribute; but, while the valley was thus lying open, enclosures seem to have taken place upon the sides of the mountains; because the land there was not intermixed, and was of little comparative value; and, therefore, small opposition would be made to its being appropriated by those to whose habitations it was contiguous. Hence the singular appearance which the sides of many of these mountains exhibit, intersected, as they are, almost to the summit, with stone walls. When first erected, these stone fences must have little disfigured the face of the country; as part of the lines would every where be hidden by the quantity of native wood then remaining; and the lines would also be broken (as they still are) by the rocks which interrupt and vary their course. In the meadows, and in those parts of the lower grounds where the soil has not been sufficiently drained, and could not afford a stable foundation, there, when the increasing value of land, and the inconvenience suffered from intermixed plots of ground in common field, had induced each inhabitant to enclose his own, they were compelled to make the fences of alders, willows, and other trees. These, where the native wood had disappeared, have frequently enriched the vallies with a sylvan appearance; while the intricate intermixture of property has given

to the fences a graceful irregularity, which, where large properties are prevalent, and large capitals employed in agriculture, is unknown. This sylvan appearance is heightened by the the number of ash-trees planted in rows along the quick fences, and along the walls, for the purpose of browsing the cattle at the approach of winter. The branches are lopped off and strewn upon the pastures; and when the cattle have stripped them of the leaves, they are used for repairing the hedges or for fuel.

We have thus seen a numerous body of Dalesmen creeping into possession of their home-steads, their little crofts, their mountain-enclosures; and, finally, the whole vale is visibly divided; except, perhaps, here and there some marshy ground, which, till fully drained, would not repay the trouble of enclosing. But these last partitions do not seem to have been general, till long after the pacification of the Borders, by the union of the two crowns: when the cause, which had first determined the distribution of land into such small parcels, had not only ceased, — but likewise a general improvement had taken place in the country, with a correspondent rise in the value of its produce. From the time of the union, it is certain that this species of feudal population must rapidly have diminished. That it was formerly much more numerous than it is at present, is evident from the multitude of tenements (I do not mean houses, but small divisions of land) which belonged formerly each

to a several proprietor, and for which separate fines are paid to the manorial lord at this day. These are often in the proportion of four to one of the present occupants. "Sir Launcelot Threlkeld, who lived in the reign of Henry VII., was wont to say, he had three noble houses, one for pleasure, Crosby, in Westmoreland, where he had a park full of deer; one for profit and warmth, wherein to reside in winter, namely, Yanwith, nigh Penrith; and the third, Threlkeld, (on the edge of the vale of Keswick), well stocked with tenants to go with him to the wars." But, as I have said, from the union of the two crowns, this numerous vassalage (their services not being wanted) would rapidly diminish; various tenements would be united in one possessor; and the aboriginal houses, probably little better than hovels, like the kraels of savages, or the huts of the Highlanders of Scotland, would fall into decay, and the places of many be supplied by substantial and comfortable buildings, a majority of which remain to this day scattered over the vallies, and are often the only dwellings found in them.

From the time of the erection of these houses, till within the last sixty years, the state of society, though no doubt slowly and gradually improving, underwent no material change. Corn was grown in these vales (through which no carriage-road had yet been made) sufficient upon each estate to furnish bread for each family, and no more: notwithstanding the union of several tenements, the possessions of each

inhabitant still being small, in the same field was seen an intermixture of different crops ; and the plough was interrupted by little rocks, mostly overgrown with wood, or by spongy places, which the tillers of the soil had neither leisure nor capital to convert into firm land. The storms and moisture of the climate induced them to sprinkle their upland property with outhouses of native stone, as places of shelter for their sheep, where, in tempestuous weather, food was distributed to them. Every family spun from its own flock the wool with which it was clothed ; a weaver was here and there found among them ; and the rest of their wants was supplied by the produce of the yarn, which they carded and spun in their own houses, and carried to market, either under their arms, or more frequently on pack-horses, a small train taking their way weekly down the valley or over the mountains to the most commodious town. They had, as I have said, their rural chapel, and of course their minister, in clothing or in manner of life, in no respect differing from themselves, except on the Sabbath-day ; this was the sole distinguished individual among them ; every thing else, person and possession, exhibited a perfect equality, a community of shepherds and agriculturists, proprietors, for the most part, of the lands which they occupied and cultivated.

While the process above detailed was going on, the native forest must have been every where receding ; but trees were planted for

the sustenance of the flocks in winter, — such was then the rude state of agriculture; and, for the same cause, it was necessary that care should be taken of some part of the growth of the native woods. Accordingly, in Queen Elizabeth's time, this was so strongly felt, that a petition was made to the Crown, praying, "that the Blomaries in High Furness might be abolished, on account of the quantity of wood which was consumed in them for the use of the mines, to the great detriment of the cattle." But this same cause, about a hundred years after, produced effects directly contrary to those which had been deprecated. The re-establishment, at that period, of furnaces upon a large scale, made it the interest of the people to convert the steeper and more stony of the enclosures, sprinkled over with remains of the native forest, into close woods, which, when cattle and sheep were excluded, rapidly sowed and thickened themselves. The reader's attention has been directed to the cause by which tufts of wood, pasturage, meadow, and arable land, with its various produce, are intricately intermingled in the same field; and he will now see, in like manner, how enclosures entirely of wood, and those of cultivated ground, are blended all over the country under a law of similar wildness.

An historic detail has thus been given of the manner in which the hand of man has acted upon the surface of the inner regions of this mountainous country, as incorporated with

and subservient to the powers and processes of nature. We will now take a view of the same agency—acting, within narrower bounds, for the production of the few works of art and accommodations of life which, in so simple a state of society, could be necessary. These are merely habitations of man and coverts for beasts, roads and bridges, and places of worship.

And to begin with the COTTAGES. They are scattered over the vallies, and under the hill sides, and on the rocks; and, even to this day, in the more retired dales, without any intrusion of more assuming buildings;

Cluster'd like stars some few, but single most,
 And lurking dimly in their shy retreats,
 Or glancing on each other cheerful looks,
 Like separated stars with clouds between.

MS.

The dwelling-houses, and contiguous out-houses, are, in many instances, of the colour of the native rock, out of which they have been built; but, frequently the Dwelling or Fire-house, as it is ordinarily called, has been distinguished from the barn or byer by rough-cast and white wash, which, as the inhabitants are not hasty in renewing it, in a few years acquires, by the influence of weather, a tint at once sober and variegated. As these houses have been, from father to son, inhabited by persons engaged in the same occupations, yet necessarily with changes in their circumstances, they have received without incongru-

ity additions and accommodations adapted to the needs of each successive occupant, who, being for the most part proprietor, was at liberty to follow his own fancy: so that these humble dwellings remind the contemplative spectator of a production of nature, and may (using a strong expression) rather be said to have grown than to have been erected; — to have risen, by an instinct of their own, out of the native rock — so little is there in them of formality, such is their wildness and beauty. Among the numerous recesses and projections in the walls and in the different stages of their roofs, are seen bold and harmonious effects of contrasted sunshine and shadow. It is a favourable circumstance, that the strong winds, which sweep down the vallies, induced the inhabitants, at a time when the materials for building were easily procured, to furnish many of these dwellings with substantial porches; and such as have not this defence, are seldom unprovided with a projection of two large slates over their thresholds. Nor will the singular beauty of the chimneys escape the eye of the attentive traveller. Sometimes a low chimney, almost upon a level with the roof, is overlaid with a slate, supported upon four slender pillars, to prevent the wind from driving the smoke down the chimney. Others are of a quadrangular shape, rising one or two feet above the roof; which low square is often surmounted by a tall cylinder, giving to the cottage chimney the most beautiful shape in:

which it is ever seen. Nor will it be too fanciful or refined to remark, that there is a pleasing harmony between a tall chimney of this circular form, and the living column of smoke, ascending from it through the still air. These dwellings, mostly built, as has been said, of rough unhewn stone, are roofed with slates, which were rudely taken from the quarry before the present art of splitting them was understood, and are, therefore, rough and uneven in their surface, so that both the coverings and sides of the houses have furnished places of rest for the seeds of lichens, mosses, ferns, and flowers. Hence buildings, which in their very form call to mind the processes of nature, do thus, clothed in part with a vegetable garb, appear to be received into the bosom of the living principle of things, as it acts and exists among the woods and fields; and, by their colour and their shape, affectingly direct the thoughts to that tranquil course of nature and simplicity, along which the humble-minded inhabitants have, through so many generations, been led. Add the little garden with its shed for bee-hives, its small bed of pot-herbs, and its borders and patches of flowers for Sunday posies, with sometimes a choice few too much prized to be plucked; an orchard of proportioned size; a cheese-press, often supported by some tree near the door; a cluster of embowering sycamores for summer shade; with a tall fir, through which the winds sing when other trees are leafless;

the little rill or household spout murmuring in all seasons ; — combine these incidents and images together, and you have the representative idea of a mountain-cottage in this country so beautifully formed in itself, and so richly adorned by the hand of nature.

Till within the last sixty years there was no communication between any of these vales by carriage-roads ; all bulky articles were transported on pack-horses. Owing, however, to the population not being concentrated in villages, but scattered, the vallies themselves were intersected as now by innumerable lanes and path-ways leading from house to house and from field to field. These lanes, where they are fenced by stone walls, are mostly bordered with ashes, hazels, wild roses, and beds of tall fern, at their base ; while the walls themselves, if old, are overspread with mosses, small ferns, wild strawberries, the geranium, and lichens : and, if the wall happen to rest against a bank of earth, it is sometimes almost wholly concealed by a rich facing of stone-fern. It is a great advantage to a traveller or resident, that these numerous lanes and paths, if he be a zealous admirer of nature, will lead him on into all the recesses of the country, so that the hidden treasures of its landscapes may, by an ever-ready guide, be laid open to his eyes.

Likewise to the smallness of the several properties is owing the great number of bridges over the brooks and torrents, and the daring

and graceful neglect of danger or accommodation with which so many of them are constructed, the rudeness of the forms of some, and their endless variety. But, when I speak of this rudeness, I must at the same time add, that many of these structures are in themselves models of elegance, as if they had been formed upon principles of the most thoughtful architecture. It is to be regretted that these monuments of the skill of our ancestors, and of that happy instinct by which consummate beauty was produced, are disappearing fast; but sufficient specimens remain* to give a high gratification to the man of genuine taste. Travellers who may not have been accustomed to pay attention to things so inobtrusive, will excuse me if I point out the proportion between the span and elevation of the arch, the lightness of the parapet, and the graceful manner in which its curve follows faithfully that of the arch.

* Written some time ago. The injury done since, is more than could have been calculated upon.

Singula de nobis anni prædantur euntes. This is in the course of things; but why should the genius that directed the ancient architecture of these vales have deserted them? For the bridges, churches, mansions, cottages, and their richly fringed and flat-roofed outhouses, venerable as the grange of some old abbey, have been substituted structures, in which baldness only seems to have been studied, or plans of the most vulgar utility. But some improvement may be looked for in future; the gentry *recently* have copied the old models, and successful instances might be pointed out, if I could take the liberty.

Upon this subject I have nothing further to notice, except the PLACES OF WORSHIP, which have mostly a little school-house adjoining.* The architecture of these churches and chapels, where they have not been recently rebuilt or modernised, is of a style not less appropriate and admirable than that of the dwelling-houses and other structures. How sacred the spirit by which our forefathers were directed! The *religio loci* is no where violated by these unstinted, yet unpretending, works of human hands. They exhibit generally a well-proportioned oblong, with a suitable porch, in some instances a steeple tower, and in others nothing more than a small belfry, in which one or two bells hang visibly. But these objects, though pleasing in their forms, must

* In some places scholars were formerly taught in the church, and at others the school-house was a sort of anti-chapel to the place of worship, being under the same roof; an arrangement which was abandoned as irreverent. It continues, however, to this day in Borrowdale. In the parish register of that chapelry is a notice, that a youth who had quitted the valley, and died in one of the towns on the coast of Cumberland, had requested that his body should be brought and interred at the foot of the pillar by which he had been accustomed to sit while a school-boy. One cannot but regret that parish registers so seldom contain any thing but bare names; in a few of this country, especially in that of Loweswater, I have found interesting notices of unusual natural occurrences — characters of the deceased, and particulars of their lives. There is no good reason why such memorials should not be frequent; these short and simple annals would in future ages become precious.

necessarily, more than others in rural scenery, derive their interest from the sentiments of piety and reverence for the modest virtues and simple manners of humble life with which they may be contemplated. A man must be very insensible who would not be touched with pleasure at the sight of the chapel of Buttermere, so strikingly expressing, by its diminutive size, how small must be the congregation there assembled, as it were, like one family; and proclaiming at the same time to the passenger, in connection with the surrounding mountains, the depth of that seclusion in which the people live, that has rendered necessary the building of a separate place of worship for so few. A patriot, calling to mind the images of the stately fabrics of Canterbury, York, or Westminster, will find a heart-felt satisfaction in presence of this lowly pile, as a monument of the wise institutions of our country, and as evidence of the all-pervading and paternal care of that venerable Establishment, of which it is, perhaps, the humblest daughter. The edifice is scarcely larger than many of the single stones or fragments of rock which are scattered near it.

We have thus far confined our observations on this division of the subject, to that part of these Dales which runs up far into the mountains.

As we descend towards the open country, we meet with halls and mansions, many of which have been places of defence against the

incursions of the Scottish borderers ; and they not unfrequently retain their towers and battlements. To these houses, parks are sometimes attached, and to their successive proprietors we chiefly owe whatever ornament is still left to the country of majestic timber. Through the open parts of the vales are scattered, also, houses of a middle rank between the pastoral cottage and the old hall residence of the knight or esquire. Such houses differ much from the rugged cottages before described, and are generally graced with a little court or garden in front, where may yet be seen specimens of those fantastic and quaint figures which our ancestors were fond of shaping out in yew-tree, holly, or box-wood. The passenger will sometimes smile at such elaborate display of petty art, while the house does not deign to look upon the natural beauty or the sublimity which its situation almost unavoidably commands.

Thus has been given a faithful description, the minuteness of which the reader will pardon, of the face of this country as it was, and had been through centuries, till within the last sixty years. Towards the head of these Dales was found a perfect Republic of Shepherds and Agriculturists, among whom the plough of each man was confined to the maintenance of his own family, or to the occasional accommodation of his neighbour.* Two or three

* One of the most pleasing characteristics of manners

cows furnished each family with milk and cheese. The chapel was the only edifice that presided over these dwellings, the supreme head of this pure Commonwealth; the members of which existed in the midst of a powerful empire, like an ideal society or an organized community, whose constitution had been imposed and regulated by the mountains which protected it. Neither high-born nobleman, knight, nor esquire, was here; but many of these humble sons of the hills had a consciousness that the land, which they walked over and tilled, had for more than five hundred years been possessed by men of their name and blood; and venerable was the transition, when a curious traveller, descending from the heart of the mountains, had come to some ancient manorial residence in the more open parts of the Vales, which, through the

in secluded and thinly-peopled districts, is a sense of the degree in which human happiness and comfort are dependent on the contingency of neighbourhood. This is implied by a rhyming adage common here, "*Friends are far, when neighbours are nar*" (near). This mutual helpfulness is not confined to out-of-doors work; but is ready upon all occasions. Formerly, if a person became sick, especially the mistress of a family, it was usual for those of the neighbours who were more particularly connected with the party by amicable offices, to visit the house, carrying a present; this practice, which is by no means obsolete, is called *owning* the family, and is regarded as a pledge of a disposition to be otherwise serviceable in a time of disability and distress.

rights attached to its proprietor, connected the almost visionary mountain republic he had been contemplating with the substantial frame of society as existing in the laws and constitution of a mighty empire.

SECTION THIRD.

CHANGES, AND RULES OF TASTE FOR PREVENTING THEIR
BAD EFFECTS.

SUCH, as hath been said, was the appearance of things till within the last sixty years. A practice, denominated Ornamental Gardening, was at that time becoming prevalent over England. In union with an admiration of this art, and in some instances in opposition to it, had been generated a relish for select parts of natural scenery: and Travellers, instead of confining their observations to Towns, Manufactories, or Mines, began (a thing till then unheard of) to wander over the island in search of sequestered spots, distinguished as they might accidentally have learned, for the sublimity or beauty of the forms of Nature there to be seen. — Dr. Brown, the celebrated Author of the Estimate of the Manners and Principles of the Times, published a letter to a friend, in which the attractions of the Vale of Keswick were delineated with a powerful pencil, and the feeling of a genuine Enthusiast. Gray, the Poet, followed: he died soon after his forlorn and melancholy pilgrimage to the Vale of Keswick, and the record left behind him of what he had seen and felt in this journey, excited that pensive interest with which the human mind is ever disposed to listen to the farewell words

of a man of genius. The journal of Gray feelingly showed how the gloom of ill health and low spirits had been irradiated by objects, which the Author's powers of mind enabled him to describe with distinctness and unaffected simplicity. Every reader of this journal must have been impressed with the words which conclude his notice of the Vale of Grasmere : — "Not a single red tile, no flaring gentleman's house or garden-wall, breaks in upon the repose of this little unsuspected paradise; but all is peace, rusticity, and happy poverty, in its neatest and most becoming attire."

What is here so justly said of Grasmere applied almost equally to all its sister Vales. It was well for the undisturbed pleasure of the Poet that he had no forebodings of the change which was soon to take place; and it might have been hoped that these words, indicating how much the charm of what *was*, depended upon what was *not*, would of themselves have preserved the ancient franchises of this and other kindred mountain retirements from trespass; or (shall I dare to say?) would have secured scenes so consecrated from profanation. The lakes had now become celebrated; visitors flocked hither from all parts of England; the fancies of some were smitten so deeply, that they became settlers; and the Islands of Derwentwater and Winandermere, as they offered the strongest temptation, were the first places seized upon, and were instantly defaced by the intrusion.

The venerable wood that had grown for centuries round the small house called St. Herbert's Hermitage, had indeed some years before been felled by its native proprietor, and the whole island planted anew with Scotch firs, left to spindle up by each other's side — a melancholy phalanx, defying the power of the winds, and disregarding the regret of the spectator, who might otherwise have cheated himself into a belief, that some of the decayed remains of those oaks, the place of which was in this manner usurped, had been planted by the Hermit's own hand: This sainted spot, however, suffered comparatively little injury. At the bidding of an alien improver, the Hind's Cottage, upon Vicar's island, in the same lake, with its embowering sycamores and cattle-shed, disappeared from the corner where they stood; and right in the middle, and upon the precise point of the island's highest elevation, rose a tall square habitation, with four sides exposed, like an astronomer's observatory, or a warren-house reared upon an eminence for the detection of depredators, or, like the temple of Æolus, where all the winds pay him obeisance. Round this novel structure, but at a respectful distance, platoons of firs were stationed, as if to protect their commander when weather and time should somewhat have shattered his strength. Within the narrow limits of this island were typified also the state and strength of a kingdom, and its religion as it had been, and was, — for neither was the druidical circle

uncreated, nor the church of the present establishment; nor the stately pier, emblem of commerce and navigation; nor the fort to deal out thunder upon the approaching invader. The taste of a succeeding proprietor rectified the mistakes as far as was practicable, and has ridded the spot of its puerilities. The church, after having been docked of its steeple, is applied both ostensibly and really, to the purpose for which the body of the pile was actually erected, namely, a boat-house; the fort is demolished; and, without indignation on the part of the spirits of the ancient Druids who officiated at the circle upon the opposite hill, the mimic arrangement of stones, with its *sanctum sanctorum*, has been swept away.

The present instance has been singled out, extravagant as it is, because, unquestionably, this beautiful country has, in numerous other places, suffered from the same spirit, though not clothed exactly in the same form, nor active in an equal degree. It will be sufficient here to utter a regret for the changes that have been made upon the principal Island at Winandermere, and in its neighbourhood. What could be more unfortunate than the taste that suggested the paring of the shores, and surrounding with an embankment this spot of ground, the natural shape of which was so beautiful! An artificial appearance has thus been given to the whole, while infinite varieties of minute beauty have been destroyed. Could not the margin of this noble island be

given back to nature? Winds and waves work with a careless and graceful hand: and, should they in some places carry away a portion of the soil, the trifling loss would be amply compensated by the additional spirit, dignity, and loveliness, which these agents and the other powers of nature would soon communicate to what was left behind. As to the larch-plantations upon the main shore, — they who remember the original appearance of the rocky steeps, scattered over with native hollies and ash-trees, will be prepared to agree with what I shall have to say hereafter upon plantations* in general.

But, in truth, no one can now travel through the more frequented tracts, without being offended, at almost every turn, by an introduction of discordant objects, disturbing that peaceful harmony of form and colour, which had been through a long lapse of ages most happily preserved.

All gross transgressions of this kind originate, doubtless, in a feeling natural and honourable to the human mind, viz. the pleasure which it receives from distinct ideas, and from the perception of order, regularity, and contrivance. Now, unpractised minds receive these impressions only from objects that are divided from each other by strong lines of demarcation; hence the delight with which such minds are

* These are disappearing fast, under the management of the present Proprietor, and native wood is resuming its place.

smitten by formality and harsh contrast. But I would beg of those who are eager to create the means of such gratification, first carefully to study what already exists; and they will find, in a country so lavishly gifted by nature, an abundant variety of forms marked out with a precision that will satisfy their desires. Moreover, a new habit of pleasure will be formed opposite to this, arising out of the perception of the fine gradations by which in nature one thing passes away into another, and the boundaries that constitute individuality disappear in one instance only to be revived elsewhere under a more alluring form. The hill of Dunmallet, at the foot of Ulswater, was once divided into different portions, by avenues of fir-trees, with a green and almost perpendicular lane descending down the steep hill through each avenue;—contrast this quaint appearance with the image of the same hill overgrown with self-planted wood,—each tree springing up in the situation best suited to its kind, and with that shape which the situation constrained or suffered it to take. What endless melting and playing into each other of forms and colours does the one offer to a mind at once attentive and active; and how insipid and lifeless, compared with it, appear those parts of the former exhibition with which a child, a peasant perhaps, or a citizen unfamiliar with natural imagery, would have been most delighted!

• The disfigurement which this country has

undergone, has not, however, proceeded wholly from the common feelings of human nature which have been referred to as the primary sources of bad taste in rural imagery; another cause must be added, that has chiefly shown itself in its effect upon buildings. I mean a warping of the natural mind occasioned by a consciousness that, this country being an object of general admiration, every new house would be looked at and commented upon either for approbation or censure. Hence all the deformity and ungracefulness that ever pursue the steps of constraint or affectation. Persons, who in Leicestershire or Northamptonshire would probably have built a modest dwelling like those of their sensible neighbours, have been turned out of their course; and, acting a part, no wonder if, having had little experience, they act it ill. The craving for prospect, also, which is immoderate, particularly in new settlers, has rendered it impossible that buildings, whatever might have been their architecture, should in most instances be ornamental to the landscape; rising as they do from the summits of naked hills in staring contrast to the snugness and privacy of the ancient houses.

No man is to be condemned for a desire to decorate his residence and possessions; feeling a disposition to applaud such an endeavour, I would show how the end may be best attained. The rule is simple; with respect to grounds — work, where you can, in the spirit

of nature, with an invisible hand of art. Planting, and a removal of wood, may thus, and thus only, be carried on with good effect; and the like may be said of building, if Antiquity, who may be styled the co-partner and sister of Nature, be not denied the respect to which she is entitled. I have already spoken of the beautiful forms of the ancient mansions of this country, and of the happy manner in which they harmonise with the forms of nature. Why cannot such be taken as a model, and modern internal convenience be confined within their external grace and dignity. Expense to be avoided, or difficulties to be overcome, may prevent a close adherence to this model; still, however, it might be followed to a certain degree in the style of architecture and in the choice of situation, if the thirst for prospect were mitigated by those considerations of comfort, shelter, and convenience, which used to be chiefly sought after. But should an aversion to old fashions unfortunately exist, accompanied with a desire to transplant into the cold and stormy North, the elegancies of a villa formed upon a model taken from countries with a milder climate, I will adduce a passage from an English poet, the divine Spenser, which will show in what manner such a plan may be realised without injury to the native beauty of these scenes.

“ Into that forest farre they thence him led,
 Where was their dwelling in a pleasant glade
 With MOUNTAINS round about environed,

And MIGHTY woods which did the valley shade,
 And like a stately theatre it made,
 Spreading itself into a spacious plaine ;
 And in the midst a little river plaide
 Emongst the puny stones which seem'd to 'plaine
 With gentle murmure that his course they did restraine

Beside the same a dainty place there lay,
 Planted with mirtle trees and laurels green,
 In which the birds sang many a lovely lay
 Of God's high praise, and of their sweet loves teene,
 As it an earthly paradise had beene ;
 In whose *enclosed shadow* there was pight
 A fair pavillion, *scarcely to be seen*,
 The which was all within most richly dight,
 That greatest princes living it mote well delight."

Houses or mansions suited to a mountainous region, should be "not obvious, not obtrusive, but retired;" and the reasons for this rule, though they have been little adverted to, are evident. Mountainous countries, more frequently and forcibly than others, remind us of the power of the elements, as manifested in winds, snows, and torrents, and accordingly make the notion of exposure very displeasing; while shelter and comfort are in proportion necessary and acceptable. Far-winding valleys difficult of access, and the feelings of simplicity habitually connected with mountain retirements, prompt us to turn from ostentation as a thing there eminently unnatural and out of place. A mansion, amid such scenes, can never have sufficient dignity or interest to become principal in the landscape, and to render the mountains, lakes, or torrents, by which it may be surrounded, a subordinate

part of the view. It is, I grant, easy to conceive, that an ancient castellated building, hanging over a precipice or raised upon an island, or the peninsula of a lake, like that of Kilchurn Castle, upon Loch Awe, may not want, whether deserted or inhabited, sufficient majesty to preside for a moment in the spectator's thoughts over the high mountains among which it is embosomed; but its titles are from antiquity—a power readily submitted to upon occasion as the vicegerent of Nature: it is respected, as having owed its existence to the necessities of things, as a monument of security in times of disturbance and danger long passed away,—as a record of the pomp and violence of passion, and a symbol of the wisdom of law;—it bears a countenance of authority, which is not impaired by decay.

“Child of loud-throated war, the mountain-stream
Roars in thy hearing; but thy hour of rest
Is come, and thou art silent in thy age!”

To such honours a modern edifice can lay no claim; and the puny efforts of elegance appear contemptible, when, in such situations, they are obtruded in rivalry with the sublilities of Nature. But, towards the verge of a district like this of which we are treating, where the mountains subside into hills of moderate elevation, or in an undulating or flat country, a gentleman's mansion may, with propriety, become a principal feature in the landscape;

and, itself being a work of art, works and traces of artificial ornament may, without censure, be extended around it, as they will be referred to the common centre, the house ; the right of which to impress within certain limits a character of obvious ornament will not be denied, where no commanding forms of nature dispute it, or set it aside. Now, to a want of the perception of this difference, and to the causes before assigned, may chiefly be attributed the disfigurement which the Country of the Lakes has undergone, from persons who may have built, demolished, and planted, with full confidence, that every change and addition was or would become an improvement.

The principle that ought to determine the position, apparent size, and architecture of a house, viz. that it should be so constructed, and (if large) so much of it hidden, as to admit of its being gently incorporated into the scenery of nature — should also determine its colour. Sir Joshua Reynolds used to say, “If you would fix upon the best colour for your house, turn up a stone, or pluck up a handful of grass by the roots, and see what is the colour of the soil where the house is to stand, and let that be your choice.” Of course, this precept given in conversation, could not have been meant to be taken literally. For example, in Low Furness, where the soil, from its strong impregnation with iron, is universally of a deep red, if this rule

were strictly followed, the house also must be of a glaring red ; in other places it must be of a sullen black ; which would only be adding annoyance to annoyance. The rule, however, as a general guide, is good ; and, in agricultural districts, where large tracts of soil are laid bare by the plough, particularly if (the face of the country being undulating) they are held up to view, this rule, though not to be implicitly adhered to, should never be lost sight of ;—the colour of the house ought, if possible, to have a cast or shade of the colour of the soil. The principal is, that the house must harmonise with the surrounding landscape : accordingly, in mountainous countries, with still more confidence may it be said, “ look at the rocks and those parts of the mountains where the soil is visible, and they will furnish a safe direction.” Nevertheless, it will often happen that the rocks may bear so large a proportion to the rest of the landscape, and may be of such a tone of colour, that the rule may not admit, even here, of being implicitly followed. For instance, the chief defect in the colouring of the Country of the Lakes (which is most strongly felt in the summer season) is an over-prevalence of a bluish tint, which the green of the herbage, the fern, and the woods, does not sufficiently counteract. If a house, therefore, should stand where this defect prevails, I have no hesitation in saying, that the colour of the neighbouring rocks would not be the best that

could be chosen. A tint ought to be introduced approaching nearer to those which, in the technical language of painters, are called *warm*: this, if happily selected, would not disturb, but would animate the landscape. How often do we see this exemplified upon a small scale by the native cottages, in cases where the glare of white-wash has been subdued by time and enriched by weather-stains! No harshness is then seen; but one of these cottages, thus coloured, will often form a central point to a landscape by which the whole shall be connected, and an influence of pleasure diffused over all the objects that compose the picture. But where the cold blue tint of the rocks is enriched by the iron tinge, the colour cannot be too closely imitated; and it will be produced of itself by the stones hewn from the adjoining quarry, and by the mortar, which may be tempered with the most gravelly part of the soil. The pure blue gravel, from the bed of the river, is, however, more suitable to the mason's purpose, who will probably insist also that the house must be covered with rough-cast, otherwise it cannot be kept dry; if this advice be taken, the builder of taste will set about contriving such means as may enable him to come the nearest to the effect aimed at.

The supposed necessity of rough-cast to keep out rain in houses not built of hewn stone or brick, has tended greatly to injure English landscape, and the neighbourhood of these

Lakes especially, by furnishing such apt occasion for whitening buildings. That white should be a favorite colour for rural residences is natural for many reasons. The mere aspect of cleanliness and neatness thus given, not only to an individual house, but, where the practice is general, to the whole face of the country, produces moral associations so powerful, that, in many minds, they take place of all others. But what has already been said upon the subject of cottages, must have convinced men of feeling and imagination, that a human dwelling of the humblest class may be rendered more deeply interesting to the affections, and far more pleasing to the eye, by other influences, than a sprightly tone of colour spread over its outside. I do not, however, mean to deny, that a small white building, embowered in trees, may, in some situations, be a delightful and animating object — in no way injurious to the landscape; but this only where it sparkles from the midst of a thick shade, and in rare and solitary instances; especially if the country be itself rich and pleasing, and abound with grand forms. On the sides of bleak and desolate moors, we are indeed thankful for the sight of white cottages and white houses plentifully scattered, where, without these, perhaps every thing would be cheerless: this is said, however, with hesitation; and with a wilful sacrifice of some higher enjoyments. But I have certainly seen such buildings glittering at sunrise, and in wandering lights, with no common pleasure.

The continental traveller also will remember, that the convents hanging from the rocks of the Rhine, the Rhone, the Danube, or among the Appenines, or the mountains of Spain, are not looked at with less complacency when, as is often the case, they happen to be of a brilliant white. But this is perhaps owing, in no small degree, to the contrast of that lively colour with the gloom of monastic life, and to the general want of rural residences of smiling and attractive appearance, in those countries.

The objections to white, as a colour, in large spots or masses in landscape, especially in a mountainous country, are insurmountable. In nature, pure white is scarcely ever found but in small objects, such as flowers; or in those which are transitory, as the clouds, foam of rivers, and snow. Mr. Gilpin, who notices this, has also recorded the just remark of Mr. Locke, of N —, that white destroys the *gradations* of distance; and, therefore, an object of pure white can scarcely ever be managed with good effect in landscape-painting. Five or six white houses, scattered over a valley, by their obtrusiveness, dot the surface, and divide it into triangles, or other mathematical figures, haunting the eye, and disturbing that repose which might otherwise be perfect. I have seen a single white house materially impair the majesty of a mountain; cutting away, by a harsh separation, the whole of its base, below the point on which the house stood. Thus was the apparent size of the mountain reduced,

not by the interposition of another object in a manner to call forth the imagination, which will give more than the eye loses; but what had been abstracted in this case was left visible; and the mountain appeared to take its beginning, or to rise, from the line of the house, instead of its own natural base. But, if I may express my own individual feeling, it is after sunset, at the coming on of twilight, that white objects are most to be complained of. The solemnity and quietness of nature at that time are always marred, and often destroyed by them. When the ground is covered with snow, they are of course inoffensive; and in moonshine they are always pleasing — it is a tone of light with which they accord: and the dimness of the scene is enlivened by an object at once conspicuous and cheerful. I will conclude this subject with noticing, that the cold, slaty colour, which many persons, who have heard the white condemned, have adopted in its stead, must be disapproved of for the reason already given. The flaring yellow runs into the opposite extreme, and is still more censurable. Upon the whole, the safest colour, for general use, is something between a cream and a dust-colour, commonly called stone colour; — there are, among the Lakes, examples of this that need not be pointed out.*

* A proper colouring of houses is now becoming general. It is best that the colouring material should be mixed with the rough-cast, and not laid on as a wash afterwards,

The principle taken as our guide, viz. that the house should be so formed, and of such apparent size and colour, as to admit of its being gently incorporated with the works of nature, should also be applied to the management of the grounds and plantations, and is here more urgently needed; for it is from abuses in this department, far more even than from the introduction of exotics in architecture (if the phrase may be used), that this country has suffered. Larch and fir plantations have been spread, not merely with a view to profit, but in many instances for the sake of ornament. To those who plant for profit, and are thrusting every other tree out of the way, to make room for their favourite, the larch, I would utter first a regret, that they should have selected these lovely vales for their vegetable manufactory, when there is so much barren and irreclaimable land in the neighbouring moors, and in other parts of the island, which might have been had for this purpose at a far cheaper rate. And I will also beg leave to represent to them, that they ought not to be carried away by flattering promises from the speedy growth of this tree; because in rich soils and sheltered situations, the wood, though it thrives fast, is full of sap, and of little value; and is, likewise, very subject to ravage from the attacks of insects, and from blight. Accordingly, in Scotland, where planting is much better understood, and carried on upon an incomparably larger scale than among us, good soil and sheltered situations are appropriated to the oak, the ash,

and other deciduous trees; and the larch is now generally confined to barren and exposed ground. There the plant, which is a hardy one, is of slower growth; much less liable to injury; and the timber is of better quality. But the circumstances of many permit, and their taste leads them, to plant with little regard to profit; and there are others, less wealthy, who have such a lively feeling of the native beauty of these scenes, that they are laudably not unwilling to make some sacrifices to heighten it. Both these classes of persons, I would entreat to enquire of themselves wherein that beauty which they admire consists. They would then see that, after the feeling has been gratified that prompts us to gather round our dwelling a few flowers and shrubs, which from the circumstance of their not being native, may, by their very looks, remind us that they owe their existence to our hands, and their prosperity to our care; they will see that, after this natural desire has been provided for, the course of all beyond has been predetermined by the spirit of the place. Before I proceed, I will remind those who are not satisfied with the restraint thus laid upon them, that they are liable to a charge of inconsistency, when they are so eager to change the face of that country, whose native attractions, by the act of erecting their habitations in it, they have so emphatically acknowledged. And surely there is not a single spot that would not have, if well managed, sufficient dignity to support itself,

unaided by the productions of other climates, or by elaborate decorations which might be becoming elsewhere.

Having adverted to the feelings that justify the introduction of a few exotic plants, provided they be confined almost to the doors of the house, we may add, that a transition should be contrived, without abruptness, from these foreigners to the rest of the shrubs, which ought to be of the kinds scattered by Nature, through the woods — holly, broom, wild-rose, elder, dogberry, white and black thorn, &c. — either these only, or such as are carefully selected in consequence of their being united in form, and harmonising in colour with them, especially with respect to colour, when the tints are most diversified, as in autumn and spring. The various sorts of fruit-and-blossom-bearing trees usually found in orchards, to which may be added those of the woods, — namely, the wilding, black cherry tree, and wild cluster-cherry (here called heck-berry) — may be happily admitted as an intermediate link between the shrubs and the forest trees; which last ought almost entirely to be such as are natives of the country. Of the birch, one of the most beautiful of the native trees, it may be noticed, that, in dry and rocky situations, it oustrips even the larch, which many persons are tempted to plant merely on account of the speed of its growth. The Scotch fir is less attractive during its youth than any other plant; but, when full-grown, if it has had room to spread out its

arms, it becomes a noble tree ; and, by those who are disinterested enough to plant for posterity, it may be placed along with the sycamore near the house ; for, from their massiveness, both these trees unite well with buildings, and in some situations with rocks also ; having, in their forms and apparent substances, the effect of something intermediate betwixt the immoveableness and solidity of stone, and the spray and foliage of the lighter trees. If these general rules be just, what shall we say to whole acres of artificial shrubbery and exotic trees among rocks and dashing torrents, with their own wild wood in sight—where we have the whole contents of the nurseryman's catalogue jumbled together—colour at war with colour, and form with form?—among the most peaceful subjects of Nature's kingdom, everywhere discord, distraction, and bewilderment ! But this deformity, bad as it is, is not so obtrusive as the small patches and large tracts of larch-plantations that are overrunning the hill sides. To justify our condemnation of these, let us again recur to Nature. The process, by which she forms woods and forests, is as follows. Seeds are scattered indiscriminately by winds, brought by waters, and dropped by birds. They perish, or produce, according as the soil and situation upon which they fall are suited to them : and under the same dependence, the seedling or the sucker, if not cropped by animals, (which Nature is often careful to prevent by fencing it

about with brambles or other prickly shrubs) thrives, and the tree grows, sometimes single, taking its own shape without constraint, but for the most part compelled to conform itself to some law imposed upon it by its neighbours. From low and sheltered places, vegetation travels upwards to the more exposed; and the young plants are protected, and to a certain degree fashioned, by those that have preceded them. The continuous mass of foliage which would be thus produced, is broken by rocks, or by glades or open places, where the browsing of animals has prevented the growth of wood. As vegetation ascends, the winds begin also to bear their part in moulding the forms of the trees; but, thus mutually protected, trees, though not of the hardiest kind, are enabled to climb high up the mountains. Gradually, however, by the quality of the ground, and by increasing exposure, a stop is put to their ascent; the hardy trees only are left: those also, by little and little, give way — and a wild and irregular boundary is established, graceful in its outline, and never contemplated without some feeling, more or less distinct, of the powers of Nature by which it is imposed.

Contrast the liberty that encourages, and the law that limits, this joint work of nature and time, with the disheartening necessities, restrictions, and disadvantages, under which the artificial planter must proceed, even he whom long observation and fine feeling have best qualified for his task. In the first place his trees, how-

ever well chosen and adapted to their several situations, must generally start all at the same time; and this necessity would of itself prevent that fine connection of parts, that sympathy and organization, if I may so express myself, which pervades the whole of a natural wood, and appears to the eye in its single trees, its masses of foliage, and their various colours, when they are held up to view on the side of a mountain; or when, spread over a valley, they are looked down upon from an eminence. It is therefore impossible, under any circumstances, for the artificial planter to rival the beauty of nature. But a moment's thought will show that, if ten thousand of this spiky tree, the larch, are stuck in at once upon the side of a hill, they can grow up into nothing but deformity; that, while they are suffered to stand, we shall look in vain for any of those appearances which are the chief sources of beauty in a natural wood.

It must be acknowledged that the larch, till it has outgrown the size of a shrub, shows, when looked at singly, some elegance in form and appearance, especially in spring, decorated, as it then is, by the pink tassels of its blossoms; but, as a tree, it is less than any other pleasing: its branches (for *boughs* it has none) have no variety in the youth of the tree, and little dignity, even when it attains its full growth; *leaves* it cannot be said to have, consequently neither affords shade nor shelter. In spring the larch becomes green long before

the native trees ; and its green is so peculiar and vivid, that, finding nothing to harmonize with it, wherever it comes forth, a disagreeable speck is produced. In summer, when all other trees are in their pride, it is of a dingy lifeless hue ; in autumn of a spiritless unvaried yellow, and in winter it is still more lamentably distinguished from every other deciduous tree of the forest, for they seem only to sleep, but the larch appears absolutely dead. If an attempt be made to mingle thickets, or a certain proportion of other forest-trees, with the larch, its horizontal branches intolerantly cut them down as with a scythe, or force them to spindle up to keep pace with it. The terminating spike renders it impossible that the several trees, where planted in numbers, should ever blend together so as to form a mass or masses of wood. Add thousands to tens of thousands, and the appearance is still the same — a collection of separate individual trees, obstinately presenting themselves as such ; and which, from whatever point they are looked at, if but seen, may be counted upon the fingers. Sunshine, or shadow, has little power to adorn the surface of such a wood ; and the trees not carrying up their heads, the wind raises among them no majestic undulations. It is indeed true, that, in countries where the larch is a native, and where, without interruption, it may sweep from valley to valley, and from hill to hill, a sublime image may be produced by such a forest, in the same manner as

by one composed of any other single tree, to the spreading of which no limits can be assigned. For sublimity will never be wanting, where the sense of innumerable multitude is lost in, and alternates with, that of intense unity; and to the ready perception of this effect, similarity and almost identity of individual form and monotony of colour contribute. But this feeling is confined to the native immeasurable forest; no artificial plantation can give it.

The foregoing observations will, I hope, (as nothing has been condemned or recommended without a substantial reason) have some influence upon those who plant for ornament merely. To such as plant for profit, I have already spoken. Let me then entreat that the native deciduous trees may be left in complete possession of the lower ground; and that plantations of larch, if introduced at all, may be confined to the highest and most barren tracts. Interposition of rocks would there break the dreary uniformity of which we have been complaining; and the winds would take hold of the trees, and imprint upon their shapes a wildness congenial to their situation.

Having determined what kinds of trees must be wholly rejected, or at least very sparingly used, by those who are unwilling to disfigure the country; and having shown what kinds ought to be chosen; I should have given, if my limits had not already been overstepped, a few practical rules for the manner in which trees

ought to be disposed in planting. But to this subject I should attach little importance, if I could succeed in banishing such trees as introduce deformity, and could prevail upon the proprietor to confine himself, either to those found in the native woods, or to such as accord with them. This is, indeed, the main point; for, much as these scenes have been injured by what has been taken from them—buildings, trees, and woods, either through negligence, necessity, avarice, or caprice—it is not the removals, but the harsh *additions* that have been made, which are the worst grievance—a standing and unavoidable annoyance. Often have I felt this distinction, with mingled satisfaction and regret; for, if no positive deformity or discordance be substituted or superinduced, such is the benignity of Nature, that, take away from her beauty after beauty, and ornament after ornament, her appearance cannot be marred—the scars, if any be left, will gradually disappear before a healing spirit; and what remains will still be soothing and pleasing.—

“ Many hearts deplored
 The fate of those old trees; and oft with pain
 The traveller at this day will stop and gaze
 On wrongs which nature scarcely seems to heed :
 For sheltered places, bosoms, nooks, and bays,
 And the pure mountains, and the gentle Tweed,
 And the green silent pastures, yet remain.”

There are few ancient woods left in this part of England upon which such indiscriminate

ravage as is here "deplored," could now be committed. But, out of the numerous copses, fine woods might in time be raised, probably without sacrifice of profit, by leaving, at the periodical fellings, a due proportion of the healthiest trees to grow up into timber.—This plan has fortunately, in many instances, been adopted; and they, who have set the example, are entitled to the thanks of all persons of taste. As to the management of planting with reasonable attention to ornament, let the images of nature be your guide, and the whole secret lurks in a few words; thickets or underwoods—single trees—trees clustered or in groups—groves—unbroken woods, but with varied masses of foliage—glades—invisible or winding boundaries—in rocky districts, a seemly proportion of rock left wholly bare, and other parts half hidden—disagreeable objects concealed, and formal lines broken—trees climbing up to the horizon, and, in some places, ascending from its sharp edge, in which they are rooted, with the whole body of the tree appearing to stand in the clear sky—in other parts, woods surmounted by rocks utterly bare and naked, which add to the sense of height, as if vegetation could not thither be carried, and impress a feeling of duration, power of resistance, and security from change!

The author has been induced to speak thus at length, by a wish to preserve the native beauty of this delightful district, because still further changes in its appearance must inevi-

tably follow, from the change of inhabitants and owners which is rapidly taking place. — About the same time that strangers began to be attracted to the country, and to feel a desire to settle in it, the difficulty, that would have stood in the way of their procuring situations, was lessened by an unfortunate alteration in the circumstances of the native peasantry, proceeding from a cause which then began to operate, and is now felt in every house. The family of each man, whether *estatesman* or farmer, formerly had a twofold support; first, the produce of his lands and flocks; and, secondly, the profit drawn from the employment of the women and children, as manufacturers; spinning their own wool in their own houses (work chiefly done in the winter season), and carrying it to market for sale. Hence, however numerous the children, the income of the family kept pace with its increase. But, by the invention and universal application of machinery, this second resource has been cut off; the gains being so far reduced, as not to be sought after but by a few aged persons disabled from other employment. Doubtless, the invention of machinery has not been to these people a pure loss; for the profits arising from home-manufactures operated as a strong temptation to choose that mode of labour in neglect of husbandry. They also participate in the general benefit which the island has derived from the increased value of the produce of land, brought about by the estab-

lishment of manufactories, and in the consequent quickening of agricultural industry. But this is far from making them amends; and now that home-manufactures are nearly done away, though the women and children might, at many seasons of the year, employ themselves with advantage in the fields beyond what they are accustomed to do, yet still all possible exertion in this way cannot be rationally expected from persons whose agricultural knowledge is so confined, and, above all, where there must necessarily be so small a capital. The consequence, then, is — that proprietors and farmers being no longer able to maintain themselves upon small farms, several are united in one, and the buildings go to decay, or are destroyed; and that the lands of the *estatesmen* being mortgaged, and the owners constrained to part with them, they fall into the hands of wealthy purchasers, who in like manner unite and consolidate; and, if they wish to become residents, erect new mansions out of the ruins of the ancient cottages, whose little enclosures, with all the wild graces that grew out of them, disappear. The feudal tenure under which the estates are held has indeed done something towards checking this influx of new settlers; but so strong is the inclination, that these galling restraints are endured; and it is probable, that in a few years the country on the margin of the Lakes will fall almost entirely into the possession of gentry, either strangers or natives. It is then

much to be wished, that a better taste should prevail among these new proprietors ; and, as they cannot be expected to leave things to themselves, that skill and knowledge should prevent unnecessary deviations from that path of simplicity and beauty along which, without design and unconsciously, their humble predecessors have moved. In this wish the author will be joined by persons of pure taste throughout the whole island, who, by their visits (often repeated) to the Lakes in the North of England, testify that they deem the district a sort of national property, in which every man has a right and interest who has an eye to perceive and a heart to enjoy.

MISCELLANEOUS

OBSERVATIONS.

MR. WEST, in his well-known Guide to the Lakes, recommends, as the best season for visiting this country, the interval from the beginning of June to the end of August; and, the two latter months being a time of vacation and leisure, it is almost exclusively in these that strangers resort hither. But that season is by no means the best; the colouring of the mountains and woods, unless where they are diversified by rocks, is of too unvaried a green; and, as a large portion of the vallies is allotted to hay-grass, some want of variety is found there also. The meadows, however, are sufficiently enlivened after hay-making begins, which is much later than in the southern part of the island. A stronger objection is rainy weather, setting in sometimes at this period with a vigour, and continuing with a perseverance, that may remind the disappointed and dejected traveller

of those deluges of rain which fall among the Abyssinian mountains, for the annual supply of the Nile. The months of September and October (particularly October) are generally attended with much finer weather; and the scenery is then, beyond comparison, more diversified, more splendid, and beautiful; but, on the other hand, short days prevent long excursions, and sharp and chill gales are unfavourable to parties of pleasure out of doors. Nevertheless, to the sincere admirer of nature, who is in good health and spirits, and at liberty to make a choice, the six weeks following the 1st of September may be recommended in preference to July and August. For there is no inconvenience arising from the season which, to such a person, would not be amply compensated by the *autumnal* appearance of any of the more retired vallies, into which discordant plantations and unsuitable buildings have not yet found entrance. — In such spots, at this season, there is an admirable compass and proportion of natural harmony in colour, through the whole scale of objects; in the tender green of the after-grass upon the meadows, interspersed with islands of grey or mossy rock, crowned by shrubs and trees; in the irregular inclosures of standing corn, or stubble-fields, in like manner broken; in the mountain-sides glowing with fern of divers colours; in the calm blue lakes and river-pools; and in the foliage of the trees, through all the tints of autumn, — from the pale and brilliant yellow

of the birch and ash, to the deep greens of the unfaded oak and alder, and of the ivy upon the rocks, upon the trees, and the cottages. Yet, as most travellers are either stinted, or stint themselves, for time, the space between the middle or last week in May, and the middle or last week of June, may be pointed out as affording the best combination of long days, fine weather, and variety of impressions. Few of the native trees are then in full leaf; but, for whatever may be wanting in depth of shade, more than an equivalent will be found in the diversity of foliage, in the blossoms of the fruit-and-berry-bearing trees which abound in the woods, and in the golden flowers of the broom and other shrubs, with which many of the copses are interveined. In those woods, also, and on these mountainsides which have a northern aspect, and in the deep dells, many of the spring-flowers still linger; while the open and sunny places are stocked with the flowers of the approaching summer. And, besides, is not an exquisite pleasure still untasted by him who has not heard the choir of linnets and thrushes chaunting their love-songs in the copses, woods, and hedge-rows of a mountainous country; safe from the birds of prey, which build in the inaccessible crags, and are at all hours seen or heard wheeling about in the air? The number of these formidable creatures is probably the cause, why, in the *narrow* vallies, there are no skylarks; as the destroyer would be enabled to

dart upon them from the near and surrounding crags, before they could descend to their ground-nests for protection. It is not often that the nightingale resorts to these vales ; but almost all the other tribes of our English warblers are numerous ; and their notes, when listened to by the side of broad still waters, or when heard in unison with the murmuring of mountain-brooks, have the compass of their power enlarged accordingly. There is also an imaginative influence in the voice of the cuckoo, when that voice has taken possession of a deep mountain valley, very different from any thing which can be excited by the same sound in a flat country. Nor must a circumstance be omitted, which here renders the close of spring especially interesting ; I mean the practice of bringing down the ewes from the mountains to yeas in the vallies and enclosed grounds. The herbage being thus cropped as it springs, *that* first tender emerald green of the season, which would otherwise have lasted little more than a fortnight, is prolonged in the pastures and meadows for many weeks : while they are farther enlivened by the multitude of lambs bleating and skipping about. These sportive creatures, as they gather strength, are turned out upon the open mountains, and with their slender limbs, their snow-white colour, and their wild and light motions, beautifully accord or contrast with the rocks and lawns, upon which they must now begin to seek their food. And last, but not least, at this time the traveller

will be sure of room and comfortable accommodation, even in the smaller inns. I am aware that few of those who may be inclined to profit by this recommendation will be able to do so, as the time and manner of an excursion of this kind are mostly regulated by circumstances which prevent an entire freedom of choice. It will therefore be more pleasant to observe, that, though the months of July and August are liable to many objections, yet it often happens that the weather, at this time, is not more wet and stormy than they, who are really capable of enjoying the sublime forms of nature in their utmost sublimity, would desire. For no traveller, provided he be in good health, and with any command of time, would have a just privilege to visit such scenes, if he could grudge the price of a little confinement among them, or interruption in his journey, for the sight or sound of a storm coming on or clearing away. Insensible must he be who would not congratulate himself upon the bold bursts of sunshine, the descending vapours, wandering lights and shadows, and the invigorated torrents and water-falls, with which broken weather, in a mountainous region, is accompanied. At such a time there is no cause to complain, either of the monotony of midsummer colouring, or the glaring atmosphere of long, cloudless, and hot days.

Thus far concerning the respective advantages and disadvantages of the different seasons for visiting this country. As to the order

in which objects are best seen — a lake being composed of water flowing from higher grounds, and expanding itself till its receptacle is filled to the brim, — it follows, that it will appear to most advantage when approached from its outlet, especially if the lake be in a mountainous country ; for, by this way of approach, the traveller faces the grander features of the scene, and is gradually conducted into its most sublime recesses. Now, every one knows, that from amenity and beauty the transition to sublimity is easy and favourable ; but the reverse is not so ; for, after the faculties have been elevated, they are indisposed to humbler excitement.*

It is not likely that a mountain will be ascended without disappointment, if a wide range of prospect be the object, unless either the summit be reached before sun-rise, or the visitant remain there until the time of sun-set, and afterwards. The precipitous sides of the mountain, and the neighbouring summits, may

* The only instances to which the foregoing observations do not apply, are Derwent-water and Lowes-water. Derwent is distinguished from all the other Lakes by being *surrounded* with sublimity : the fantastic mountains of Borrowdale to the south, the solitary majesty of Skiddaw to the north, the bold steeps of Wallow-crag and Lodore to the east, and to the west the clustering mountains of New-lands. Lowes-water is tame at the head, but towards its outlet has a magnificent assemblage of mountains. Yet as far as respects the formation of such receptacles, the general observation holds good : neither Derwent nor Lowes-water derive any supplies from the streams of those mountains that dignify the landscape towards the outlets.

be seen with effect under any atmosphere which allows them to be seen at all ; but *he* is the most fortunate adventurer, who chances to be involved in vapours which open and let in an extent of country partially, or, dispersing suddenly, reveal the whole region from centre to circumference.

A stranger to a mountainous country may not be aware that his walk in the early morning ought to be taken on the eastern side of the vale, otherwise he will lose the morning light, first touching the tops and thence creeping down the sides of the opposite hills, as the sun ascends, or he may go to some central eminence, commanding both the shadows from the eastern, and the lights upon the western mountains. But, if the horizon line in the east be low, the western side may be taken for the sake of the reflections, upon the water, of light from the rising sun. In the evening, for like reasons, the contrary course should be taken.

After all, it is upon the *mind* which a traveller brings along with him that his acquisitions, whether of pleasure or profit, must principally depend.—May I be allowed a few words on this subject ?

Nothing is more injurious to genuine feeling than the practice of hastily and ungraciously depreciating the face of one country by comparing it with that of another. True it is *Qui bene distinguit bene docet* ; yet fastidiousness is a wretched travelling companion ; and the best guide to which, in matters of taste we can en-

trust ourselves, is a disposition to be pleased. For example, if a traveller be among the Alps, let him surrender up his mind to the fury of the gigantic torrents, and take delight in the contemplation of their almost irresistible violence, without complaining of the monotony of their foaming course, or being disgusted with the muddiness of the water—apparent even where it is violently agitated. In Cumberland and Westmorland, let not the comparative weakness of the streams prevent him from sympathising with such impetuosity as they possess; and, making the most of the present objects, let him, as he justly may do, observe with admiration the unrivalled brilliancy of the water, and that variety of motion, mood, and character, that arises out of the want of those resources by which the power of the streams in the Alps is supported.—Again, with respect to the mountains; though these are comparatively of diminutive size, though there is little of perpetual snow, and no voice of summer-avalanches is heard among them; and though traces left by the ravage of the elements are here comparatively rare and unimpressive, yet out of this very deficiency proceeds a sense of stability and permanence that is, to many minds, more grateful—

“ While the course rushes to the sweeping breeze
Sigh forth their ancient melodies.”

Among the Alps are few places that do not preclude this feeling of tranquil sublimity.

Havoc, and ruin, and desolation, and encroachment, are everywhere more or less obtruded; and it is difficult, notwithstanding the naked loftiness of the *pikes*, and the snow-capped summits of the *mounts*, to escape from the depressing sensation, that the whole are in a rapid process of dissolution; and, were it not that the destructive agency must abate as the heights diminish, would, in time to come, be levelled with the plains. Nevertheless, I would relish to the utmost the demonstrations of every species of power at work to effect such changes.

From these general views let us descend a moment to detail. A stranger to mountain imagery naturally on his first arrival looks out for sublimity in every object that admits of it; and is almost always disappointed. For this disappointment there exists, I believe, no general preventive; nor is it desirable that there should. But with regard to one class of objects, there is a point in which injurious expectations may be easily corrected. It is generally supposed that waterfalls are scarcely worth being looked at except after much rain, and that, the more swollen the stream, the more fortunate the spectator; but this however is true only of large cataracts with sublime accompaniments; and not even of these without some drawbacks. In other instances, what becomes, at such a time, of that sense of refreshing coolness which can only be felt in dry and sunny weather, when the rocks, herbs,

and flowers glisten with moisture diffused by the breath of the precipitous water? But, considering these things as objects of sight only, it may be observed that the principal charm of the smaller waterfalls or cascades consists in certain proportions of form and affinities of colour, among the component parts of the scene; and in the contrast maintained between the falling water and that which is apparently at rest, or rather settling gradually into quiet in the pool below. The beauty of such a scene, where there is naturally so much agitation, is also heightened, in a peculiar manner, by the *glimmering*, and, towards the verge of the pool, by the *steady*, reflection of the surrounding images. Now, all those delicate distinctions are destroyed by heavy floods, and the whole stream rushes along in foam and tumultuous confusion. A happy proportion of component parts is indeed noticeable among the landscapes of the North of England; and, in this characteristic essential to a perfect picture, they surpass the scenes of Scotland, and, in a still greater degree, those of Switzerland.

As a resident among the Lakes, I frequently hear the scenery of this country compared with that of the Alps; and therefore a few words shall be added to what has been incidentally said upon that subject.

If we could recall, to this region of lakes, the native pine-forests, with which many hundred years ago a large portion of the heights

was covered, then, during spring and autumn, it might frequently, with much propriety, be compared to Switzerland, — the elements of the landscape would be the same — one country representing the other in miniature. Towns, villages, churches, rural seats, bridges and roads: green meadows and arable grounds, with their various produce, and deciduous woods of diversified foliage which occupy the vales and lower regions of the mountains, would, as in Switzerland, be divided by dark forests from ridges and round-topped heights covered with snow, and from pikes and sharp declivities imperfectly arrayed in the same glittering mantle: and the resemblance would be still more perfect on those days when vapours, resting upon, and floating around the summits, leave the elevation of the mountains less dependent upon the eye than on the imagination. But the pine-forests have wholly disappeared; and only during late spring and early autumn is realized here that assemblage of the imagery of different seasons, which is exhibited through the whole summer among the Alps, — winter in the distance, — and warmth, leafy woods, verdure and fertility at hand, and widely diffused.

Striking, then, from among the permanent materials of the landscape, that stage of vegetation which is occupied by pine-forests, and, above that, the perennial snows, we have mountains, the highest of which little exceed 3000 feet, while some of the Alps do not fall

short of 14,000 or 15,000, and 8,000 or 10,000 is not an uncommon elevation. Our tracts of wood and water are almost as diminutive in comparison; therefore, as far as sublimity is dependent upon absolute bulk and height, and atmospherical influences in connection with these, it is obvious, that there can be no rivalry. But a short residence among the British Mountains will furnish abundant proof, that, after a certain point of elevation, viz. that which allows of compact and fleecy clouds settling upon, or sweeping over, the summits, the sense of sublimity depends more upon form and relation of objects to each other than upon their actual magnitude; and, that an elevation of 3000 feet is sufficient to call forth in a most impressive degree the creative, and magnifying, and softening powers of the atmosphere. Hence, on the score even of sublimity, the superiority of the Alps is by no means so great as might hastily be inferred; — and, as to the *beauty* of the lower regions of the Swiss Mountains, it is noticeable — that, as they are all regularly mown, their surface has nothing of that mellow tone and variety of hues by which mountain turf, that is never touched by the scythe, is distinguished. On the smooth and steep slopes of the Swiss hills, these plots of verdure do indeed agreeably unite their colour with that of the deciduous trees, or make a lively contrast with the dark green pine-groves that define them, and among which they run in endless variety of shapes

—but this is most pleasing *at first sight*; the permanent gratification of the eye requires finer gradations of tone, and a more delicate blending of hues into each other. Besides, it is only in spring and late autumn that cattle animate by their presence the Swiss lawns; and, though the pastures of the higher regions where they feed during the summer are left in their natural state of flowery herbage, those pastures are so remote, that their texture and colour are of no consequence in the composition of any picture in which a lake of the Vales is a feature. Yet in those lofty regions, how vegetation is invigorated by the genial climate of that country! Among the luxuriant flowers there met with, groves, or forests, if I may so call them, of Monks-hood are frequently seen; the plant of deep, rich blue, and as tall as in our gardens; and this at an elevation where, in Cumberland, Icelandic moss would only be found, or the stony summits be utterly bare.

We have, then, for the colouring of Switzerland, *principally* a vivid green herbage, black woods, and dazzling snows, presented in masses with a grandeur to which no one can be insensible; but not often graduated by Nature into soothing harmony, and so ill suited to the pencil, that though abundance of good subjects may be there found, they are not such as can be deemed *characteristic* of the country; nor is this unfitness confined to colour: the forms of the mountains, though

many of them in some points of view the noblest that can be conceived, are apt to run into spikes and needles, and present a jagged outline which has a mean effect, transferred to canvass. This must have been felt by the ancient masters; for, if I am not mistaken, they have not left a single landscape, the materials of which are taken from the *peculiar* features of the Alps; yet Titian passed his life almost in their neighbourhood; the Pousins and Claude must have been well acquainted with their aspects; and several admirable painters, as Tibaldi and Luino, were born among the Italian Alps. A few experiments have lately been made by Englishmen, but they only prove that courage, skill, and judgment, may surmount any obstacles; and it may be safely affirmed, that they who have done best in this bold adventure, will be the least likely to repeat the attempt. But, though our scenes are better suited to painting than those of the Alps, I should be sorry to contemplate either country in reference to that art, further than as its fitness or unfitness for the pencil renders it more or less pleasing to the eye of the spectator, who has learned to observe and feel, chiefly from Nature herself.

Deeming the points in which Alpine imagery is superior to British too obvious to be insisted upon, I will observe that the deciduous woods, though in many places unapproachable by the axe, and triumphing in the pomp and prodigality of Nature, have, in gene-

ral,* neither the variety nor beauty which would exist in those of the mountains of Britain, if left to themselves. Magnificent walnut-trees grow upon the plains of Switzerland; and fine trees, of that species, are found scattered over the hill-sides: birches also grow here and there in luxuriant beauty; but neither these, nor oaks, are ever a prevailing tree, nor can even be said to be common; and the oaks, as far as I had an opportunity of observing, are greatly inferior to those of Britain. Among the interior vallies the proportion of beeches and pines is so great that other trees are scarcely noticeable; and surely such woods are at all seasons much less agreeable than that rich and harmonious distribution of oak, ash, elm, birch, and alder, that formerly clothed the sides of Snowdon and Helvellyn; and of which no mean remains still survive at the head of Ulswater. On the Italian side of the Alps, chesnut and walnut-trees grow at a considerable height on the mountains; but, even there, the foliage is not equal in beauty to the "natural product" of this climate. In fact the sunshine of the South of Europe, so envied when heard of at a distance, is in many respects injurious to rural beauty, particularly as it incites to the cultivation of spots of ground which in colder climates would be left in the hands of nature, favouring at the same time the culture of

* The greatest variety of trees is found in the Valais.

plants that are more valuable on account of the fruit they produce to gratify the palate, than for affording pleasure to the eye, as materials of landscape. Take, for instance, the Promontory of Bellagio, so fortunate in its command of the three branches of the Lake of Como, yet the ridge of the Promontory itself, being for the most part covered with vines interspersed with olive trees, accords but ill with the vastness of the green unappropriated mountains, and derogates not a little from the sublimity of those finely contrasted pictures to which it is a fore-ground. The vine, when cultivated upon a large scale, notwithstanding all that may be said of it in poetry,* makes but a dull formal appearance in landscape; and the olive-tree (though one is loth to say so) is not more grateful to the eye than our common willow, which it much resembles; but the hoariness of hue, common to both, has in the aquatic plant an appropriate delicacy, harmonising with the situation in which it most delights. The same may no

* Lucretius has charmingly described a scene of this kind.

“Inque dies magis in montem succedere sylvas
 Cogebant, infráque locum concedere cultis:
 Prata, lacus, rivos, segetes, vinetaque læta
 Collibus et campis ut haberent, atque olearum
 Cærulea distinguens inter *plaga* currere posset
 Per tumulos, et convalleis, campósque profusa:
 Ut nunc esse vides vario distincta lepore
 Omnia, quæ pomis intersita dulcibus ornant,
 Arbustisque tenent felicibus obsita circúm.”

doubt be said of the olive among the dry rocks of Attica, but I am speaking of it as found in gardens and vineyards in the North of Italy. At Bellagio, what Englishman can resist the temptation of substituting, in his fancy, for these formal treasures of cultivation, the natural variety of one of our parks—its pastured lawns, coverts of hawthorn, of wild-rose, and honeysuckle, and the majesty of forest trees?—such wild graces as the banks of Derwent-water shewed in the time of the Ratcliffes; and Gowbarrow Park, Lowther, and Rydal do at this day.

As my object is to reconcile a Briton to the scenery of his own country, though not at the expense of truth, I am not afraid of asserting that in many points of view our LAKES, also, are much more interesting than those of the Alps; first, as is implied above, from being more happily proportioned to the other features of the landscape; and next, both as being infinitely more pellucid, and less subject to agitation from the winds.* Como, (which may

* It is remarkable that Como (as is probably the case with other Italian Lakes) is more troubled by storms in summer than in winter. Hence the propriety of the following verses.

“Lari! margine ubique confragoso
 Nulli cœlicolum negas sacellum
 Picto pariete saxeoque tecto;
 Hinc miracula multa navitarum
 Audis, nec placido refellis ore,
 Sed nova usque paras, Noto vel Euro
 Æstivas quatientibus cavernas,
 Vel surgentis ab Adduæ cubili
 Cæco grandinis imbre provoluto.”

LANDOR.

perhaps be styled the King of Lakes, as Lugano is certainly the Queen) is disturbed by a periodical wind blowing *from* the head in the morning, and *towards* it in the afternoon. The magnificent Lake of the four Cantons, especially its noblest division, called the Lake of Uri, is not only much agitated by winds, but in the night time is disturbed from the bottom, as I was told, and indeed as I witnessed, without any apparent commotion in the air; and when at rest, the water is not pure to the eye, but of a heavy green hue — as is that of all the other lakes, apparently according to the degree in which they are fed by melted snows. If the Lake of Geneva furnish an exception, this is probably owing to its vast extent, which allows the water to deposit its impurities. The water of the English lakes, on the contrary, being of a crystalline clearness, the reflections of the surrounding hills are frequently so lively, that it is scarcely possible to distinguish the point where the real object terminates, and its unsubstantial duplicate begins. The lower part of the Lake of Geneva, from its narrowness, must be much less subject to agitation than the higher divisions, and, as the water is clearer than that of the other Swiss Lakes, it will frequently exhibit this appearance, though it is scarcely possible in an equal degree. During two comprehensive tours among the Alps, I did not observe, except on one of the smaller lakes, between Lugano and Ponte Tresa, a single instance of those beautiful repetitions

of surrounding objects on the bosom of the water, which are so frequently seen here: not to speak of the fine dazzling trembling network, breezy motions, and streaks and circles of intermingled smooth and rippled water, which makes the surface of our lakes a field of endless variety. But among the Alps, where every thing tends to the grand and the sublime, in surfaces as well as in forms, if the lakes do not court the placid reflections of land objects those of first-rate magnitude make compensation, in some degree, by exhibiting those ever-changing fields of green, blue, and purple shadows or lights, (one scarcely knows which to name them) that call to mind a sea-prospect contemplated from a lofty cliff.

The subject of torrents and water-falls has already been touched upon; but it may be added that in Switzerland, the perpetual accompaniment of snow upon the higher regions takes much from the effect of foaming white streams; while, from their frequency, they obstruct each other's influence upon the mind of the spectator; and, in all cases, the effect of an individual cataract, excepting the great Fall of the Rhine at Schaffhausen, is diminished by the general fury of the stream of which it is a part.

Recurring to the reflections from still water, I will describe a singular phenomenon of this kind of which I was an eye-witness.

Walking by the side of Ulswater upon a calm September morning, I saw, deep within

the bosom of the lake, a magnificent Castle, with towers and battlements, nothing could be more distinct than the whole edifice; — after gazing with delight upon it for some time, as upon a work of enchantment, I could not but regret that my previous knowledge of the place enabled me to account for the appearance. It was in fact the reflection of a pleasure-house called Lyulph's Tower — the towers and battlements magnified and so much changed in shape as not to be immediately recognized. In the meanwhile, the pleasure-house itself was altogether hidden from my view by a body of vapour stretching over it and along the hill-side on which it stands, but not so as to have intercepted its communication with the lake; and hence this novel and most impressive object, which, if I had been a stranger to the spot, would, from its being inexplicable, have long detained the mind in a state of pleasing astonishment.

Appearances of this kind, acting upon the credulity of early ages, may have given birth to, and favoured the belief in, stories of subaqueous palaces, gardens, and pleasure-grounds—the brilliant ornaments of Romance.

With this *inverted* scene I will couple a much more extraordinary phenomenon, which will shew how other elegant fancies may have had their origin, less in invention than in the actual processes of nature.

About eleven o'clock on the forenoon of a winter's day, coming suddenly, in company of

a friend, into view of the Lake of Grasmere, we were alarmed by the sight of a newly-created Island ; the transitory thought of the moment was, that it had been produced by an earthquake or some other convulsion of nature. Recovering from the alarm, which was greater than the reader can possibly sympathize with, but which was shared to its full extent by my companion, we proceeded to examine the object before us. The elevation of this new island exceeded considerably that of the old one, its neighbour ; it was likewise larger in circumference, comprehending a space of about five acres ; its surface rocky, speckled with snow, and sprinkled over with birch trees ; it was divided towards the south from the other island by a narrow frith, and in like manner from the northern shore of the lake ; on the east and west it was separated from the shore by a much larger space of smooth water.

Marvellous was the illusion ! Comparing the new with the old Island, the surface of which is soft, green, and unvaried, I do not scruple to say that, as an object of sight, it was much the more distinct. “How little faith,” we exclaimed, “is due to one sense, unless its evidence be confirmed by some of its fellows ! What Stranger could possibly be persuaded that this, which we know to be an unsubstantial mockery, is *really* so ; and that there exists only a single Island on this beautiful Lake ?” At length the appearance underwent a gradual transmutation ; it lost its prominence and pass-

ed into a glimmering and dim *inversion*, and then totally disappeared;—leaving behind it a clear open area of ice of the same dimensions. We now perceived that this bed of ice, which was thinly suffused with water, had produced the illusion, by reflecting and refracting (as persons skilled in optics would no doubt easily explain) a rocky and woody section of the opposite mountain named Silver-how.

Having dwelt so much upon the beauty of pure and still water, and pointed out the advantage which the Lakes of the North of England have in this particular over those of the Alps, it would be injustice not to advert to the sublimity that must often be given to Alpine scenes, by the agitations to which those vast bodies of diffused water are there subject. I have witnessed many tremendous thunder-storms among the Alps, and the most glorious effects of light and shadow; but I never happened to be present when any Lake was agitated by those hurricanes which I imagine must often torment them. If the commotions be at all proportionable to the expanse and depth of the waters, and the height of the surrounding mountains, then, if I may judge from what is frequently seen here, the exhibition must be awful and astonishing.—On this day, March 30, 1822, the winds have been acting upon the small Lake of Rydal, as if they had received command to carry its waters from their bed into the sky; the white billows in different quarters disappeared under clouds, or rather

drifts, of spray, that were whirled along, and up into the air by scouring winds, charging each other in squadrons in every direction, upon the Lake. The spray, having been hurried aloft till it lost its consistency and whiteness, was driven along the mountain tops like flying showers that vanish in the distance. Frequently an eddying wind scooped the waters out of the basin, and forced them upwards in the very shape of an Icelandic Geyser, or boiling fountain, to the height of several hundred feet.

This small Mere of Rydal, from its position, is subject in a peculiar degree to these commotions. The present season, however, is unusually stormy;—great numbers of fish, two of them not less than 12 pounds weight, were a few days ago cast on the shores of Derwent-water by the force of the waves.

Lest, in the foregoing comparative estimate, I should be suspected of partiality to my native mountains, I will support my general opinion by the authority of Mr. West, whose Guide to the Lakes has been eminently serviceable to the Tourist for nearly 50 years. The Author, a Roman Catholic Clergyman, had passed much time abroad, and was well acquainted with the scenery of the Continent. He thus expresses himself: “They who intend to make the continental tour should begin here; as it will give, in miniature, an idea of what they are to meet with there, in traversing the Alps and Appenines; to which our northern

mountains are not inferior in beauty of line, or variety of summit, number of lakes, and transparency of water; not in colouring of rock, or softness of turf; but in height and extent only. The mountains here are all accessible to the summit, and furnish prospects no less surprising, and with more variety, than the Alps themselves. The tops of the highest Alps are inaccessible, being covered with everlasting snow, which commencing at regular heights above the cultivated tracts, or wooded and verdant sides, form indeed the highest contrast in nature. For there may be seen all the variety of climate in one view. To this, however, we oppose the sight of the ocean, from the summits of all the higher mountains, as it appears intersected with promontaries, decorated with islands, and animated with navigation."—*West's Guide*, p. 5.

EXCURSIONS

TO

THE TOP OF SCAWFELL AND ON THE BANKS
OF ULSWATER.

It was my intention, several years ago, to describe a regular tour through this country, taking the different scenes in the most favour-

able order ; but after some progress had been made in the work it was abandoned from a conviction, that, if well executed, it would lessen the pleasure of the Traveller by anticipation, and, if the contrary, it would mislead him. The Reader may not, however, be displeased with the following extract from a letter to a Friend, giving an account of a visit to a summit of one of the highest of these mountains ; of which I am reminded by the observations of Mr. West, and by reviewing what has been said of this district in comparison with the Alps.

Having left Rosthwaite in Borrowdale, on a bright morning in the first week of October, we ascended from Seathwaite to the top of the ridge, called Ash-course, and thence beheld three distinct views ; — on one side, the continuous Vale of Borrowdale, Keswick, and Bassenthwaite, — with Skiddaw, Helvellyn, Saddle-back, and numerous other mountains, — and, in the distance, the Solway Frith and the Mountains of Scotland ; — on the other side, and below us, the Langdale Pikes — their own vale below *them* ; — Windermere, — and, far beyond Windermere, Ingleborough in Yorkshire. But how shall I speak of the deliciousness of the third prospect ! At this time, *that* was most favoured by sunshine and shade. The green Vale of Esk — deep and green, with its glittering serpent stream, lay below us ; and, on we looked to the Mountains near the Sea, — Black Comb pre-eminent, — and, still

beyond, to the Sea itself, in dazzling brightness. Turning round we saw the Mountains of Wastdale in tumult; to our right, Great Gavel, the loftiest, a distinct, and *huge* form, though the middle of the mountain was, to our eyes, as its base.

We had attained the object of this journey; but our ambition now mounted higher. We saw the summit of Scaw-fell, apparently very near to us; and we shaped our course towards it; but, discovering that it could not be reached without first making a considerable descent, we resolved, instead, to aim at another point of the same mountain, called the *Pikes*, which I have since found has been estimated as higher than the summit bearing the name of Scawfell Head, where the Stone Man is built.

The sun had never once been overshadowed by a cloud during the whole of our progress from the centre of Borrowdale. On the summit of the Pike, which we gained after much toil, though without difficulty, there was not a breath of air to stir even the papers containing our refreshment, as they lay spread out upon a rock. The stillness seemed to be not of this world:—we paused, and kept silence to listen; and no sound could be heard: the Scawfell Cataracts were voiceless to us; and there was not an insect to hum in the air. The vales which we had seen from Ash-course lay yet in view; and, side by side with Eskdale, we now saw the sister Vale of Donnerdale terminated by the Duddon Sands. But

the majesty of the mountains below, and close to us, is not to be conceived. We now beheld the whole mass of Great Gavel from its base, — the Den of Wastdale at our feet — a gulph immeasurable: Grasmire and the other mountains of Crummock — Ennerdale and its mountains; and the Sea beyond! We sat down to our repast, and gladly would we have tempered our beverage (for there was no spring or well near us) with such a supply of delicious water as we might have procured, had we been on the rival summit of Great Gavel; for on its highest point is a small triangular receptacle in the native rock, which, the shepherds say, is never dry. There we might have slaked our thirst plenteously with a pure and celestial liquid, for the cup or basin, it appears, has no other feeder than the dews of heaven, the showers, the vapours, the hoar frost, and the spotless snow.

While we were gazing around, “Look,” I exclaimed, “at yon ship upon the glittering sea!” “Is it a ship?” replied our shepherd-guide. “It can be nothing else,” interposed my companion; “I cannot be mistaken, I am so accustomed to the appearance of ships at sea.” The Guide dropped the argument; but, before a minute was gone, he quietly said, “Now look at your ship; it is changed into a horse.” So indeed it was, — a horse with a gallant neck and head. We laughed heartily; and, I hope, when again inclined to be positive, I may remember the ship and the

horse upon the glittering sea ; and the calm confidence, yet submissiveness, of our wise Man of the Mountains, who certainly had more knowledge of clouds than we, whatever might be our knowledge of ships.

I know not how long we might have remained on the summit of the Pike, without a thought of moving, had not our Guide warned us that we must not linger ; for a storm was coming. We looked in vain to espy the signs of it. Mountains, vales, and sea were touched with the clear light of the sun. " It is there," said he, pointing to the sea beyond Whitehaven, and there we perceived a light vapour unnoticeable but by a shepherd accustomed to watch all mountain bodings. We gazed around again, and yet again, unwilling to lose the remembrance of what lay before us in that lofty solitude ; and then prepared to depart. Meanwhile the air changed to cold, and we saw that tiny vapour swelled into mighty masses of cloud which came boiling over the mountains. Great Gavel, Helvellyn, and Skiddaw, were wrapped in storm ; yet Langdale, and the mountains in that quarter, remained all bright in sunshine. Soon the storm reached us ; we sheltered under a crag ; and almost as rapidly as it had come it passed away, and left us free to observe the struggles of gloom and sunshine in other quarters. Langdale now had its share, and the Pikes of Langdale were decorated by two splendid rainbows. Skiddaw also had his own rainbows. Before we

again reached Ash-course every cloud had vanished from every summit.

I ought to have mentioned that round the top of Scawfell-PIKE not a blade of grass is to be seen. Cushions or tufts of moss, parched and brown, appear between the huge blocks and stones that lie in heaps on all sides to a great distance, like skeletons or bones of the earth not needed at the creation, and there left to be covered with never-dying lichens, which the clouds and dews nourish; and adorn with colours of vivid and exquisite beauty. Flowers, the most brilliant feathers, and even gems, scarcely surpass in colouring some of those masses of stone, which no human eye beholds, except the shepherd or traveller be led thither by curiosity: and how seldom must this happen! For the other eminence is the one visited by the adventurous stranger; and the shepherd has no inducement to ascend the PIKE in quest of his sheep; no food being *there* to tempt them.

We certainly were singularly favoured in the weather; for when we were seated on the summit, our conductor, turning his eyes thoughtfully round, said, "I do not know that in my whole life, I was ever, at any season of the year, so high upon the mountains on so *calm* a day." (It was the 7th of October.) Afterwards we had a spectacle of the grandeur of earth and heaven commingled; yet without terror. We knew that the storm would pass away;—for so our prophetic Guide had assured us.

118 EXCURSION TO THE TOP OF SCAWFELL.

Before we reached Seathwaite in Borrowdale, a few stars had appeared, and we pursued our way down the Vale, to Rosthwaite, by moonlight.

Scawfell and Helvellyn being the two Mountains of this region which will best repay the fatigue of ascending them, the following Verses may be here introduced with propriety. They are from the Author's Miscellaneous Poems.

TO ———,

ON HER FIRST ASCENT TO THE SUMMIT OF HELVELLYN.

INMATE of a Mountain Dwelling,
Thou hast clomb aloft, and gazed,
From the watch-towers of Helvellyn;
Awed, delighted, and amazed !

Potent was the spell that bound thee
Not unwilling to obey ;
For blue Ether's arms, flung round thee,
Stilled the pantings of dismay .

Lo ! the dwindled woods and meadows !
What a vast abyss is there !
Lo ! the clouds, the solemn shadows,
And the glistenings—heavenly fair !

And a record of commotion
Which a thousand ridges yield ;
Ridge, and gulf, and distant ocean
Gleaming like a silver shield !

—Take thy flight ;—possess, inherit
Alps or Andes—they are thine !
With the morning's roseate Spirit,
Sweep their length of snowy line ;

Or survey the bright dominions
 In the gorgeous colours drest
 Flung from off the purple pinions,
 Evening spreads throughout the west !

Thine are all the coral fountains
 Warbling in each sparry vault
 Of the untrodden lunar mountains ;
 Listen to their songs !—or halt,

To Niphate's top invited,
 Whither spiteful Satan steered ;
 Or descend where the ark alighted,
 When the green earth re-appeared :

For the power of hills is on thee,
 As was witnessed through thine eye
 Then, when old Helvellyn won thee
 To confess their majesty !

Having said so much of *points of view* to which few are likely to ascend, I am induced to subjoin an account of a short excursion through more accessible parts of the country, made at a *time* when it is seldom seen but by the inhabitants. As the journal was written for one acquainted with the general features of the country, only those effects and appearances are dwelt upon, which are produced by the changeableness of the atmosphere, or belong to the season when the excursion was made.

A.D. 1805.—On the 7th of November, on a damp and gloomy morning, we left Grasmere Vale, intending to pass a few days on the banks of Ullswater. A mild and dry autumn had

been unusually favourable to the preservation and beauty of foliage; and, far advanced as the season was, the trees on the larger Island of Rydal-mere retained a splendour which did not need the heightening of sunshine. We noticed, as we passed, that the line of the grey rocky shore of that island, shaggy with variegated bushes and shrubs, and spotted and striped with purplish brown heath, indistinguishably blending with its image reflected in the still water, produced a curious resemblance, both in form and colour, to a richly-coated caterpillar, as it might appear through a magnifying glass of extraordinary power. The mists gathered as we went along: but, when we reached the top of Kirkstone, we were glad we had not been discouraged by the apprehension of bad weather. Though not able to see a hundred yards before us, we were more than contented. At such a time, and in such a place, every scattered stone the size of one's head becomes a companion. Near the top of the Pass is the remnant of an old wall, which (magnified, though obscured, by the vapour) might have been taken for a fragment of some monument of ancient grandeur,—yet that same pile of stones we had never before even observed. This situation, it must be allowed, is not favourable to gaiety; but a pleasing hurry of spirits accompanies the surprise occasioned by objects transformed, dilated, or distorted, as they are when seen through such a medium. Many of the fragments of rock on

the top and slopes of Kirkstone, and of similar places, are fantastic enough in themselves; but the full effect of such impressions can only be had in a state of weather when they are not likely to be *sought* for. It was not till we had descended considerably that the fields of Hartshope were seen, like a lake tinged by the reflection of sunny clouds: I mistook them for Brothers-water, but, soon after, we saw that Lake gleaming faintly with a steelly brightness,—then, as we continued to descend, appeared the brown oaks, and the birches of lively yellow—and the cottages—and the lowly Hall of Hartshope, with its long roof and ancient chimneys. During great part of our way to Patterdale, we had rain, or rather drizzling vapour; for there was never a drop upon our hair or clothes larger than the smallest pearls upon a lady's ring.

The following morning, incessant rain till 11 o'clock, when the sky began to clear, and we walked along the eastern shore of Ullswater towards the farm of Blowick. The wind blew strong, and drove the clouds forward, on the side of the mountain above our heads;—two storm-stiffened black yew-trees fixed our notice, seen through, or under the edge of, the flying mists,—four or five goats were bounding among the rocks;—the sheep moved about more quietly, or cowered beneath their sheltering places. This is the only part of the country where goats are now found;* but this

* A.D. 1805. These also have disappeared.

morning, before we had seen these, I was reminded of that picturesque animal by two rams of mountain breed, both with Ammonian horns, and with beards majestic as that which Michael Angelo has given to his statue of Moses. — But to return; when our path had brought us to that part of the naked common which overlooks the woods and bush-besprinkled fields of Blowick, the lake, clouds, and mists were all in motion to the sound of sweeping winds; — the church and cottages of Patterdale scarcely visible, or seen only by fits between the shifting vapours. To the northward the scene was less visionary; — Place Fell steady and bold; — the whole lake driving onward like a great river—waves dancing round the small islands. The house at Blowick was the boundary of our walk; and we returned, lamenting to see a decaying and uncomfortable dwelling in a place where sublimity and beauty seemed to contend with each other. But these regrets were dispelled by a glance on the woods that clothe the opposite steeps of the lake. How exquisite was the mixture of sober and splendid hues! The general colouring of the trees was brown—rather that of ripe hazel nuts; but towards the water, there were yet beds of green, and in the highest parts of the wood, was abundance of yellow foliage, which, gleaming through a vapoury lustre, reminded us of masses of clouds, as you see them gathered together in the west, and touched with the golden light of the setting sun.

After dinner we walked up the Vale: I had never had an idea of its extent and width in passing along the public road on the other side. We followed the path that leads from house to house; two or three times it took us through some of those copses or groves that cover the little hillocks in the middle of the vale, making an intricate and pleasing intermixture of lawn and wood. Our fancies could not resist the temptation; and we fixed upon a spot for a cottage, which we began to build: and finished as easily as castles are raised in the air.— Visited the same spot in the evening. I shall say nothing of the moonlight aspect of the situation which had charmed us so much in the afternoon; but I wish you had been with us when, in returning to our friend's house, we espied his lady's large white dog, lying in the moonshine upon the round knoll under the old yew-tree in the garden, a romantic image—the dark tree and its dark shadow—and the elegant creature, as fair as a spirit! The torrents murmured softly: the mountains down which they were falling did not, to my sight furnish a back-ground for this Ossianic picture; but I had a consciousness of the depth of the seclusion, and that mountains were embracing us on all sides; “I saw not, but I *felt* that they were there.”

Friday, November 9th.—Rain, as yesterday, till 10 o'clock, when we took a boat to row down the lake. The day improved,—clouds and sunny gleams on the mountains. In the

large bay under Place Fell, three fishermen were dragging a net,—a picturesque group beneath the high and bare crags! A raven was seen aloft; not hovering like the kite, for that is not the habit of the bird; but passing on with a straight-forward perseverance, and timing the motion of its wings to its own croaking. The waters were agitated; and the iron tone of the raven's voice, which strikes upon the ear at all times as the more dolorous from its regularity, was in fine keeping with the wild scene before our eyes. This carnivorous fowl is a great enemy to the lambs of these solitudes; I recollect frequently seeing, when a boy, bunches of unfledged ravens suspended from the church-yard gates of H——, for which a reward of so much a head was given to the adventurous destroyer.—The fishermen drew their net ashore, and hundreds of fish were leaping in their prison. They were all of the kind called skellies, a sort of fresh-water herring, shoals of which may sometimes be seen dimpling or rippling the surface of the lake in calm weather. This species is not found, I believe, in any other of these lakes; nor, as far as I know, is the chevin, that *spiritless* fish, (though I am loth to call it so, for it was a prime favourite with Isaac Walton,) which must frequent Ullswater, as I have seen a large shoal passing into the lake from the river Eamont. *Here* are no pike, and the char are smaller than those of the other lakes, and of inferior quality; but the grey trout attains a very large size, sometimes weighing above twenty pounds.

This lordly creature seems to know that "retiredness is a piece of majesty; for it is scarcely ever caught, or even seen, except when it quits the depths of the lake in the spawning season, and runs up into the streams, where it is too often destroyed in disregard of the law of the land and of nature.

Quitted the boat in the bay of Sandwyke, and pursued our way towards Martindale along a pleasant path—at first through a coppice, bordering the lake, then through green fields—and came to the village, (if village it may be called, for the houses are few, and separated from each other,) a sequestered spot, shut out from the view of the lake. Crossed the one-arched bridge, below the chapel, with its "bare ring of mossy wall," and single yew-tree. At the last house in the dale we were greeted by the master, who was sitting at his door, with a flock of sheep collected round him, for the purpose of smearing them with tar (according to the custom of the season) for protection against the winter's cold. He invited us to enter, and view a room built by Mr. Hasell for the accommodation of his friends at the annual chase of red deer in his forests at the head of these dales. The room is fitted up in the sportsman's style, with a cupboard for bottles and glasses, with strong chairs, and a dining-table; and ornamented with the horns of the stags caught at these hunts for a succession of years—the length of the last race each had run being recorded under his spread-

ing antlers. The good woman treated us with oaten cake, new and crisp; and after this welcome refreshment and rest, we proceeded on our return to Patterdale by a short cut over the mountains. On leaving the fields of Sandwyke, while ascending by a gentle slope along the valley of Martindale, we had occasion to observe that in thinly-peopled glens of this character the general want of wood gives a peculiar interest to the scattered cottages embowered in sycamore. Towards its head, this valley splits into two parts; and in one of these (that to the left) there is no house, nor any building to be seen but a cattle-shed on the side of a hill, which is sprinkled over with trees, evidently the remains of an extensive forest. Near the entrance of the other division stands the house where we were entertained, and beyond the enclosures of that farm there are no other. A few old trees remain, relics of the forest, a little stream hastens, though with serpentine windings, through the uncultivated hollow, where many cattle were pasturing. The cattle of this country are generally white, or light-coloured; but these were dark brown, or black, which heightened the resemblance this scene bears to many parts of the Highlands of Scotland.—While we paused to rest upon the hill-side, though well contented with the quiet every-day sounds—the lowing of cattle, bleating of sheep, and the very gentle murmuring of the valley stream, we could not but think what a grand effect

the music of the bugle-horn would have among these mountains. It is still heard once every year, at the chase I have spoken of; a day of festivity for the inhabitants of this district except the poor deer, the most ancient of them all. Our ascent even to the top was very easy; when it was accomplished we had exceedingly fine views, some of the lofty Fells being resplendent with sunshine, and others partly shrouded by clouds. Ullswater, bordered by black steeps, was of dazzling brightness; the plain beyond Penrith smooth and bright, or rather gleamy, as the sea or sea sands. Looked down into Boardale, which, like Stybarrow, has been named from the wild swine that formerly abounded here; but it has now no sylvan covert, being smooth and bare, a long, narrow, deep, cradle-shaped glen, lying so sheltered that one would be pleased to see it planted by human hands, there being a sufficiency of soil; and the trees would be sheltered almost like shrubs in a green-house.—After having walked some way along the top of the hill, came in view of Glenriddin and the mountains at the head of Grisdale.—Before we began to descend, turned aside to a small ruin, called at this day the chapel, where it is said the inhabitants of Martindale and Patterdale were accustomed to assemble for worship. There are now no traces from which you could infer for what use the building had been erected; the loose stones and the few which yet continue piled up resemble those which lie

elsewhere on the mountain ; but the shape of the building having been oblong, its remains differ from those of a common sheep-fold ; and it has stood east and west. Scarcely did the Druids, when they fled to these fastnesses perform their rites in any situation more exposed to disturbance from the elements. One cannot pass by without being reminded that the rustic psalmody must have had the accompaniment of many a wildly-whistling blast ; and what dismal storms must have often drowned the voice of the preacher ! As we descend, Patterdale opens upon the eye in grand simplicity, screened by mountains, and proceeding from two heads, Deepdale and Hartshope, where lies the little lake of Brotherswater, named in old maps Broaderwater, and probably rightly so ; for Bassenthwaite-mere at this day, is familiarly called Broadwater ; but the change in the appellation of this small lake or pool (if it be a corruption) may have been assisted by some melancholy accident similar to what happened about twenty years ago, when two brothers were drowned there, having gone out to take their holiday pleasure upon the ice on a new-year's day.

A rough and precipitous peat track brought us down to our friend's house.—Another fine moonlight night ; but a thick fog rising from the neighbouring river, enveloped the rocky and wood-crested knoll on which our fancy-cottage had been erected ; and, under the damp cast upon my feelings, I consoled myself with

moralising on the folly of hasty decisions in matters of importance, and the necessity of having at least one year's knowledge of a place before you realise airy suggestions in solid stone.

Saturday, November 10th. At the breakfast-table tidings reached us of the death of Lord Nelson, and of the victory at Trafalgar. Sequestered as we were from the sympathy of a crowd, we were shocked to hear that the bells had been ringing joyously at Penrith to celebrate the triumph. In the rebellion of the year 1745, people fled with their valuables from the open country to Patterdale, as a place of refuge secure from the incursions of strangers. At that time, news such as we had heard might have been long in penetrating so far into the recesses of the mountains; but now, as you know, the approach is easy, and the communication, in summer time, almost hourly: nor is this strange, for travellers after pleasure are become not less active, and more numerous than those who formerly left their homes for purposes of gain. The priest on the banks of the remotest stream of Lapland will talk familiarly of Buonaparte's last conquests, and discuss the progress of the French revolution, having acquired much of his information from adventurers impelled by curiosity alone.

The morning was clear and cheerful after a night of sharp frost. At 10 o'clock we took our way on foot towards Pooley Bridge, on the same side of the lake we had coasted in a boat

the day before. — Looked backwards to the south from our favourite station above Blowick. The dazzling sunbeams striking upon the church and village, while the earth was steaming with exhalations not traceable in other quarters, rendered their forms even more indistinct than the partial and flitting veil of unilluminated vapour had done two days before. The grass on which we trod, and the trees in every thicket were dripping with melted hoarfrost. We observed the lemon-coloured leaves of the birches, as the breeze turned them to the sun, sparkle, or rather *flash*, like diamonds, and the leafless purple twigs were tipped with globes of shining crystal.

The day continued delightful, and unclouded to the end. I will not describe the country which we slowly travelled through, nor relate our adventures: and will only add, that on the afternoon of the 13th we returned along the banks of Ullswater by the usual road. The lake lay in deep repose after the agitations of a wet and stormy morning. The trees in Gowbarrow park were in that state when what is gained by the disclosure of their bark and branches compensates, almost, for the loss of foliage, exhibiting the variety which characterises the point of time between autumn and winter. The hawthorns were leafless; their round heads covered with rich green berries, and adorned with arches of green brambles, and eglantines hung with glossy hips; and the grey trunks of some of the ancient oaks, which

in the summer season might have been regarded only for their venerable majesty, now attracted notice by a pretty embellishment of green mosses and fern intermixed with russet leaves retained by those slender outstarting twigs which the veteran tree would not have tolerated in his strength. The smooth silver branches of the ashes were bare ; most of the alders as green as the Devonshire cottage-myrtle that weathers the snows of Christmas.—Will you accept it as some apology for my having dwelt so long on the woodland ornaments of these scenes—that artists speak of the trees on the banks of Ullswater, and especially along the bays of Stybarrow crags, as having a peculiar character of picturesque intricacy in their stems and branches, which their rocky stations and the mountain winds have combined to give them.

At the end of Gowbarrow park a large herd of deer were either moving slowly or standing still among the fern. I was sorry when a chance-companion, who had joined us by the way, startled them with a whistle, disturbing an image of grave simplicity and thoughtful enjoyment ; for I could have fancied that those natives of this wild and beautiful region were partaking with us a sensation of the solemnity of the closing day. The sun had been set some time ; and we could perceive that the light was fading away from the coves of Helvellyn, but the lake under a luminous sky, was more brilliant than before,

After tea at Patterdale, set out again :—

a fine evening ; the seven stars close to the mountain-top ; all the stars seemed brighter than usual. The steeps were reflected in Brotherswater, and, above the lake, appeared like enormous black perpendicular walls. The Kirkstone torrents had been swoln by the rains, and now filled the mountain pass with their roaring, which added greatly to the solemnity of our walk. Behind us, when we had climbed to a great height, we saw one light, very distinct, in the vale, like a large red star—a solitary one in the gloomy region. The cheerfulness of the scene was in the sky above us.

Reached home a little before midnight. The following verses (from the Author's Miscellaneous Poems,) after what has just been read may be acceptable to the reader, by way of conclusion to this little Volume.

O D E.

THE PASS OF KIRKSTONE.

1.

WITHIN the mind strong fancies work,
 A deep delight the bosom thrills,
 Oft as I pass along the fork
 Of these fraternal hills :
 Where, save the rugged road, we find
 No appanage of human kind ;
 Nor hint of man, if stone or rock
 Seem not his handy-work to mock
 By something cognizably shaped ;
 Mockery—or model roughly hewn,
 And left as if by earthquake strewn,
 Or from the Flood escaped :
 Altars for Druid service fit ;

(But where no fire was ever lit,
 Unless the glow-worm to the skies
 Thence offer nightly sacrifice ;)
 Wrinkled Egyptian monument ;
 Green moss-grown tower ; or hoary tent ;
 Tents of a camp that never shall be raised ;
 On which four thousand years have gazed !

2.

Ye plough-shares sparkling on the slopes !
 Ye snow-white lambs that trip
 Imprisoned 'mid the formal props
 Of restless ownership !
 Ye trees, that may to-morrow fall
 To feed the insatiate Prodigal !
 Lawns, houses, chattels, groves, and fields,
 All that the fertile valley shields ;
 Wages of folly—baits of crime,—
 Of life's uneasy game the stake,
 Playthings that keep the eyes awake
 Of drowsy, dotard Time ;
 O care ! O guilt !—O vales and plains,
 Here, 'mid his own unvexed domains,
 A Genius dwells, that can subdue
 At once all memory of You,—
 Most potent when mists veil the sky,
 Mists that distort and magnify ;
 While the course rushes, to the sweeping breeze,
 Sigh forth their ancient melodies !

3.

List to those shriller notes !—*that* march
 Perchance was on the blast,
 When through this Height's inverted arch,
 Rome's earliest legion passed !
 —They saw, adventurously impelled,
 And older eyes than theirs beheld,
 This block—and yon, whose Church-like frame
 Gives to the savage Pass its name.

Aspiring Road! that lov'st to hide
 Thy daring in a vapoury bourn,
 Not seldom may the hour return
 When thou shalt be my Guide :
 And I (as often we find cause,
 When life is at a weary pause,
 And we have panted up the hill
 Of duty with reluctant will)
 Be thankful, even though tired and faint,
 For the rich bounties of Constraint ;
 Whence oft invigorating transports flow
 That Choice lacked courage to bestow !

4.

My Soul was grateful for delight
 That wore a threatening brow ;
 A veil is lifted—can she slight
 The scene that opens now ?
 Though habitation none appear,
 The greenness tells, man must be there ;
 The shelter—that the perspective
 Is of the clime in which we live ;
 Where Toil pursues his daily round ;
 Where Pity sheds sweet tears, and Love,
 In woodbine bower or birchen grove,
 Inflicts his tender wound.
 —Who comes not hither ne'er shall know
 How beautiful the world below ;
 Nor can he guess how lightly leaps
 The brook adown the rocky steeps.
 Farewell, thou desolate Domain !
 Hope, pointing to the cultured Plain,
 Carols like a shepherd boy ;
 And who is she?—Can that be Joy !
 Who, with a sun-beam for her guide,
 Smoothly skims the meadows wide ;
 While Faith, from yonder opening cloud,
 To hill and vale proclaims aloud,
 " Whate'er the weak may dread, the wicked dare,
 Thy lot, O man, is good, thy portion fair !"

The Publishers, with permission of the Author,
have added the following

ITINERARY OF THE LAKES,
FOR THE USE OF TOURISTS.

| STAGES. | Miles |
|---|-------|
| Lancaster to Kendal, by Kirkby Lonsdale, | 30 |
